Subject Index of Volume 29

Access router selection
Target access router selection in advanced mobility scenarios 337
Access schemes
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Accounting
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
ACK tree
A combined group/tree approach for scalable many-to-many reliable multicast 3863
ACK-based polling strategy (APS)
An ACK-based polling strategy for supporting high performance and QoS in IEEE 802.11 wireless networks 358
Active measurement
pMeasure: A peer-to-peer measurement infrastructure for the internet 1665
Active measurements
Service-driven inter-domain QoS monitoring system for large-scale IP and DVB networks 1687
Active networks
Interactive Transparent Networking: Protocol meta modeling based on EFSM 3536
Active networks
Serviter: A service-oriented programmable network platform for shared infrastructure 624
Active packets
Optimized QoS priority routing for service tunability and overhead reduction using swarm based active network scheme 765
Activity management
Activity scheduling based on cross-layer information in Bluetooth sensor networks 3385
Ad hoc network
Multipath passive data acknowledgement on-demand multicast protocol 2074
Ad hoc network
Service index-based fairness scheduling in wireless ad hoc networks 2934
Ad hoc network
AIPAC: Automatic IP address configuration in mobile ad hoc networks 1189
Ad hoc networks
Speed control and policing in a cellular mobile network: SpeedNet 3633
Ad hoc networks
Ad hoc quality of service multicast routing 136
Ad hoc networks
Connected fixed node degree based topologies in ad hoc networks 1330
Ad hoc wireless networks
Energy-efficient scheduling and hybrid communication architecture for underwater littoral surveillance 3354
Adaptive applications
Resource allocation for real-time and non-real-time traffic in wireless networks 1722
Adaptive control
Adaptive model predictive TCP delay-based congestion control 1963
Adaptive cross-layer protocols
CAEM: A channel adaptive approach to energy management for wireless sensor networks 3343
Adaptive data broadcasting
Performance optimization of an adaptive wireless push system in environments with locality of demand 2542
Adaptive grouping protocol
A high performance MAC protocol for broadcast LANs with bursty traffic 944
Adaptive middleware
Design and implementation of a dynamic protocol framework 1309
Adaptive multi-mode protocol
Analysis of decentralized resource and service discovery mechanisms in wireless multi-hop networks 2710
Adaptive packet selection
An adaptive bluetooth packet selection and scheduling scheme in interference environments 2084
Adaptive polling
QAP: A QoS supportive adaptive polling protocol for wireless LANs 618
Adaptive polling
SQAP: A simple QoS supportive adaptive polling protocol for wireless LANs 934
Adaptive resource allocation
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945
Adaptive topology
Constructing efficient peer-to-peer overlay topologies by adaptive connection establishment 3567
Ad-hoc
Incorporating trust and reputation in the DSR protocol for dependable routing 2806

Ad hoc networks
An SPT-based topology control algorithm for wireless ad-hoc networks 3092
Ad-hoc networks
A framework for seamless service interworking in ad-hoc networks 3277
Ad-hoc networks
Secret instantiation in ad-hoc networks 200
Ad-hoc networks
Modeling the performance of flooding in wireless multi-hop Ad hoc networks 949
Admission control
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945
ADMs
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
ADSL
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
τ-AIMD
Experimenting with τ-AIMD over wireless asynchronous networks 2702
Aggregated traffic
Edge-to-edge proactive congestion control for aggregated traffic 801
Alert correlation
Using attack graphs for correlating, hypothesizing, and predicting intrusion alerts 2917
Algorithm
Minimizing preemption cost for path selection in Diffserv-ware MPLS networks 3825
Algorithm/protocol design and analysis
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Algorithms
A new energy efficient and fault-tolerant protocol for data propagation in smart dust networks using varying transmission range 477
Algorithms
Connected fixed node degree based topologies in ad hoc networks 1330
All-IP
An integrated model of packetized VBR teletraffic source for cellular NG All-IP wireless networks 957
All-IP architecture
SIP as a unified signalling solution in a beyond 3G system 3226
All-IP wireless networks
Design and implementation of Dynamic Service Negotiation Protocol (DSNP) 3250
All-or-nothing
Securing bulk content almost for free 280
ALM
Stability of ALM Tree with selfish receivers: A simulation study 2895
Analysis
Analysis of decentralized resource and service discovery mechanisms in wireless multi-hop networks 2710
Analysis
Flow-based fast handover for mobile IPv6 environment – implementation and analysis 3051
Analysis
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
Analytic model
Performance evaluation of subflow capable SCTP 2413
Analytical model
Modeling the performance of flooding in wireless multi-hop Ad hoc networks 949
Anomaly detection
Enhancing network traffic prediction and anomaly detection via statistical network traffic separation and combination strategies 1627
Anti-collision
Taxonomy and survey of RFID anti-collision protocols 2150
Anti-spam
An anti-spam scheme using pre-challenges 2739
Anycasting
Extension headers for IPv6 anycast 3013
Apache Web server
An integrated approach with feedback control for robust Web QoS design 3158
Application layer multicast
A performance comparison of self-organising application layer multicast overlay construction techniques 2322
Application layer multicast
Application layer multicast tree for real-time media delivery 1480
Application Layer Multicasting
End System Multicast routing for multi-party videoconferencing applications 2046
Application-aware
An energy diffserv and application-aware MAC scheduling for VBR streaming video in the IEEE 802.15.3 high-rate wireless personal area networks 3516
Applied cryptography
Practical electronic lotteries with offline TTP 2830
Approximation algorithm
Analysis and evaluation of a multiple gateway traffic-distribution scheme for gateway clusters 3170
Approximation algorithms
Locating network monitors: Complexity, heuristics, and coverage 1564
AQM
The effects of AQM on the performance of Assured Forwarding Service 2294
Assured Forwarding
The effects of AQM on the performance of Assured Forwarding Service 2294
Assured forwarding
Adaptive packet marking for achieving fairness in DiffServ networks 52
Asymmetric traffic
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
Asynchronous networks
Experimenting with τ-AIMD over wireless asynchronous networks 2702
ATM Adaptation Layer 2
Efficiency and quality of service issues in MPLS transport for the UMTS access network 820

ATM network
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Auctions
An efficient auction-based mechanism for hierarchically structured bandwidth markets 911
Authentication
Secure remote user access over insecure networks 660
Authentication
SIM-based subscriber authentication mechanism for wireless local area networks 1744
Authentication and authorization
A framework for seamless service interworking in ad-hoc networks 3277
Authentication protocol
Towards self-authenticable smart cards 2781
Autoconfiguration
AIPAC: Automatic IP address configuration in mobile ad hoc networks 1189
Automatic code generation
Achieving dependability in sensor networks through automated requirements-based programming 246
Autonomic service management
A generic architecture for autonomic service and network management 3691
Autonomous underwater vehicles
Energy-efficient scheduling and hybrid communication architecture for underwater littoral surveillance 3354
Available bandwidth
ImTCP: TCP with an inline measurement mechanism for available bandwidth 1614
Awareness driven videoconferencing
End System Multicast routing for multi-party videoconferencing applications 2046
AWGN channel
Modeling the bit-level stochastic correlation for turbo decoding 3856

BA reservation
A dynamic approach to reduce preemption in book-ahead reservation in QoS-enabled networks 1443
Backoff delay
End-to-end delay analysis and admission control in 802.11 DCF WLANs 842
Balanced tree
High-speed IP address lookup using balanced multi-way trees 1927
Bandwidth adaptation
A study on switching voice traffic seamlessly between GSM and GPRS cellular networks 1079
Bandwidth allocation
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
Bandwidth allocation
A new generalized particle approach to parallel bandwidth allocation 3933
Bandwidth clustering scheme
Optimized QoS priority routing for service tunability and overhead reduction using swarm based active network scheme 765
Bandwidth efficiency
A new efficient solution for QoS support in all optical metropolitan area networks 3135
Bandwidth markets
An efficient auction-based mechanism for hierarchically structured bandwidth markets 911
Bandwidth sharing
A generic architecture for autonomic service and network management 3691
Batch verification
Batch verification of validity of bids in homomorphic e-auction 2798
BGP
End-to-end quality of service provisioning through inter-provider traffic engineering 683
Bid validity check
Batch verification of validity of bids in homomorphic e-auction 2798
Bidirectional ring
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
Binary prefix tree
High-speed IP address lookup using balanced multi-way trees 1927
Bit error rate (BER)
Modeling the bit-level stochastic correlation for turbo decoding 3856
Bit-level stochastic correlation model
Modeling the bit-level stochastic correlation for turbo decoding 3856
BitTorrent
Analyzing the performance and fairness of BitTorrent-like networks using a general fluid model 3946
Black hole
Improve routing trust with promiscuous listening routing security algorithm in mobile ad hoc networks 1121
Blocking probability
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
Blocking probability
Modeling and analysis of queuing handoff calls in single and two-tier cellular networks 3580
Bluetooth
An adaptive bluetooth packet selection and scheduling scheme in interference environments 2084
Bluetooth
Activity scheduling based on cross-layer information in Bluetooth sensor networks 3385
Bluetooth
Blue-Park: Energy-efficient operation of Bluetooth networks using park mode 3416
Bluetooth scatternet
Activity scheduling based on cross-layer information in Bluetooth sensor networks 3385
BP neural network
A consolidation algorithm for multicast service using proportional control and neural network predictive techniques 114
breach detection probability
How many sensors for an acceptable breach detection probability 173

Broadcast
Modeling the performance of flooding in wireless multi-hop Ad hoc networks 949
Broadcast
Counter-based reliability optimization for gossip-based broadcasting 1516
Broadcast LANs
A high performance MAC protocol for broadcast LANs with bursty traffic 944
Broadcast routing
On the construction of energy-efficient maximum residual battery capacity broadcast trees in static ad hoc wireless networks 93
Broadcasting scheme
A broadcasting scheme with supporting VCR functions for near video-on-demand systems 257
Broker
Secure brokerage mechanisms for mobile electronic commerce 2308
Buffer architecture
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Buffer forwarding
Scalable MPEG-4 streaming over the IPv6 mobile network environment 3104
Buffer management
An integrated scheduling and buffer management scheme for input queued switches with finite buffer space 42
Buffer management
Service differentiation with MEDF scheduling in TCP/IP networks 812
Buffer mechanism
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Burst acknowledgment
A comparison of stop-and-wait and go-back-N ARQ schemes for IEEE 802.11e wireless infrared networks 1015
Burst assembly
Packet-based burst queue modeling at an edge in optical-burst switched networks 634
Burst queue
Packet-based burst queue modeling at an edge in optical-burst switched networks 634
Bursty traffic
A high performance MAC protocol for broadcast LANs with bursty traffic 944

CAA
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921
Calculation algorithm
Refined approximations for performance analysis and optimization of queueing model with guard channels for handovers in cellular networks 1386
Call admission control
Multi-threshold bandwidth reservation scheme of an integrated voice/data wireless network 1504
Call delivery
Performance analyses of three geography-based location strategies for PCS networks 3327
Call setup
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
CAM
A scalable IPv6 route lookup scheme via dynamic variable-stride bitmap compression and path compression 3037
Candidate access router discovery
Target access router selection in advanced mobility scenarios 337
Capacity optimization
Stochastic model and analysis for capacity optimization in communication networks 2377
CapProbe
Monitoring access link capacity using TFRC probe 1605
Cascade Vulnerability Problem
Efficient heuristic algorithms for correcting the Cascade Vulnerability Problem for interconnected networks 2109
Cell residence time
Modeling location management in wireless networks with generally distributed parameters 2386
Cellular network
Refined approximations for performance analysis and optimization of queueing model with guard channels for handovers in cellular networks 1386
Cellular networks
Cross-layer conditional retransmission for layered video streaming over cellular networks 2066
Certified email
Some common attacks against certified email protocols and the countermeasures 2759
Change point detection
Application of anomaly detection algorithms for detecting SYN flooding attacks 1433
Channel de-allocation scheme (DAS)
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Channel Failure
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921
Channel re-allocation scheme (RAS)
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Channel scheduling
An efficient preemption-based channel scheduling algorithm for service differentiation in OBS networks 2348
Channel selection algorithm
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
Channel state dependent
CAEM: A channel adaptive approach to energy management for wireless sensor networks 3343
Channel state dependent packet scheduling
An adaptive bluetooth packet selection and scheduling scheme in interference environments 2084
Channel transition
Adaptive segment-based patching scheme for video streaming delivery system 1889
Characterization and modeling
Loss and Delay Measurements of Internet Backbones 1590
Charging
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661

Cheating
Stability of ALM Tree with selfish receivers: A simulation study 2895
CIDR
End-site routing support for IPv6 multihoming1 893
Circuit emulation
Clock recovery based on packet inter-arrival time averaging 1696
Client assignment
A network-centric approach to enhancing the interactivity of large-scale distributed virtual environments 3553
Client-assisted
A client-assisted interval caching strategy for video-on-demand systems 3780
Clock recovery
Clock recovery based on packet inter-arrival time averaging 1696
Clock skew
On estimating clock skew for one-way measurements 1213
Clock synchronization
On estimating clock skew for one-way measurements 1213
Clock synchronization
Clock recovery based on packet inter-arrival time averaging 1696
Cluster computing
Analysis and evaluation of a multiple gateway traffic-distribution scheme for gateway clusters 3170
Clustering
QoS supporting and optimal energy allocation for a cluster based wireless sensor network 2569
Clustering algorithm
Design of a distributed energy-efficient clustering algorithm for heterogeneous wireless sensor networks 2230
Code assignment
Efficient OVSF code assignment and reassignment strategies in UMTS 1538
Collision resolution protocols
Energy efficiency of collision resolution protocols 3397
Communication architecture
Energy-efficient scheduiing and hybrid communication architecture for underwater littoral surveillance 3354
Communication network
An entropy-constrained algorithm for routing of communication networks 3182
Communication networks
Stochastic model and analysis for capacity optimization in communication networks 2377
Communication system planning
Applying 4-regular grid structures in large-scale access networks 1350
Communications Quality of Service (QoS)
Improvement of LRU cache for the detection and control of long-lived high bandwidth flows 103
Communications security
An incremental approach to IPv6 multihoming 582
Competition
An efficient auction-based mechanism for hierarchically structured bandwidth markets 911
Complexity analysis
Core-selection algorithms in multicast routing - comparative and complexity analysis 998
Compression
A scalable IPv6 route lookup scheme via dynamic variable-stride bitmap compression and path compression 3037
Computation complexity
Modeling the bit-level stochastic correlation for turbo decoding 3856
Computer network performance
Dynamic server selection using fuzzy inference in content distribution networks 1026
Computer networks
Speed control and policing in a cellular mobile network: SpeedNet 3633
Computer networks
A new generalized particle approach to parallel bandwidth allocation 3933
Conditional retransmission
Cross-layer conditional retransmission for layered video streaming over cellular networks 2066
Congestion control
Adaptive model predictive TCP delay-based congestion control 1963
Congestion control
An adaptive multirate congestion control protocol for multicast communications 2247
Congestion control
Performance evaluation of subflow capable SCTP 2413
Congestion control
Experimenting with τ-AIMD over wireless asynchronous networks 2702
Congestion control
Quantifying the effects of recent protocol improvements to TCP: Impact on Web performance 2853
Congestion control
Activity scheduling based on cross-layer information in Bluetooth sensor networks 3385
Congestion control
Maximum lifetime rate control and random access in multi-hop wireless networks 3844
Congestion control
Improvement of LRU cache for the detection and control of long-lived high bandwidth flows 103
Congestion control
Edge-to-edge proactive congestion control for aggregated traffic 801
Congestion control
Study on nominee selection for multicast congestion control 1458
Connectivity
Energy-efficient coverage problems in wireless ad-hoc sensor networks 413
Content Delivery
Securing bulk content almost for free 280
Content distribution
MULTI+: A robust and topology-aware peer-to-peer multicast service 900
Content distribution
Dynamic server selection using fuzzy inference in content distribution networks 1026
Content Distribution Network
On content delivery network implementation 2396

Content Distribution Network
Replica placement in ring based content delivery networks 3313
Content management
From content distribution networks to content networks – issues and challenges 551
Content-aware
A novel content-aware interleaving for wireless video transmission 2634
Contention resolution
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
Control overlay
Edge-to-edge proactive congestion control for aggregated traffic 801
Control plane
On scalability properties of the Hi3 control plane 3591
Convergence
Study on nominee selection for multicast congestion control 1458
Convex function
Nonlinear optimization for energy efficiency in IEEE 802.11a wireless LANs 3455
Cooperation
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
CORBA
Secure distributed intelligent networks 325
Core selection
Core-selection algorithms in multicast routing - comparative and complexity analysis 998
Core-based approach
Core-selection algorithms in multicast routing - comparative and complexity analysis 998
Core-based tree
Routing and wavelength assignment for core-based tree in WDM networks 1896
Correctness
Hazard avoidance in wireless sensor and actor networks 2578
Correlated losses
The PFTK-model revised 2671
Correspondent node
Macro/micro-mobility fast handover in hierarchical mobile IPv6 611
Cost function
On selecting the cost function for source routing 3602
Cost function
Finding a least hop(s) path subject to multiple additive constraints 392
Coverage
Energy-efficient coverage problems in wireless ad-hoc sensor networks 413
Coverage
Energy-efficient secure pattern based data aggregation for wireless sensor networks 446
CPL
Personalization of internet telephony services for presence with SIP and extended CPL 3766
CPL extensions
Personalization of internet telephony services for presence with SIP and extended CPL 3766
CRLs
Evaluation of certificate validation mechanisms 291
Cross-certification
Dynamic and secure management of VPNs in IPv6 multi-domain scenarios 3122
Cross-layer
Cross-layer conditional retransmission for layered video streaming over cellular networks 2066
Cross-layer design
Sleep scheduling for wireless sensor networks via network flow model 2469
Cross-layer design
Cross-layer application-specific wireless sensor network design with single-channel CSMA MAC over sense-sleep trees 3425
Cross-layer design
An integrated energy aware wireless transmission system for QoS provisioning in wireless sensor network 162
Cross-layer modeling
An integrated model of packetized VBR teletraffic source for cellular NG All-IP wireless networks 957
Cross-layer optimization
Interference-based routing in multi-hop wireless infrastructures 2693
Cross-layer wireless channel modeling
Cross-layer modeling of wireless channels for data-link and IP layer performance evaluation 827
Cryptanalysis
Cryptanalysis of some improved password-authenticated key exchange schemes 2822
Cryptography
On the implementation of security policies with adaptative encryption 2750
CSMA
Cross-layer application-specific wireless sensor network design with single-channel CSMA MAC over sense-sleep trees 3425
CSMA-CA
Performance limitations of the MAC layer in 802.15.4 low rate WPAN 2534
CSPF
Hybrid routing in next generation IP networks 879
Customization
Reducing memory fragmentation in network applications with dynamic memory allocators optimized for performance 2612

Data aggregation
E-Span and LPT for data aggregation in wireless sensor networks 2506
Data aggregation
Energy efficient routing and scheduling for real-time data aggregation in WSNs 3527
Data aggregation
Energy-efficient secure pattern based data aggregation for wireless sensor networks 446
Data Allocation
Near-optimal data allocation over multiple broadcast channels 1341
Data Broadcast
Near-optimal data allocation over multiple broadcast channels 1341

Data dissemination
A comparison of epidemic algorithms in wireless sensor networks 2450
Data dissemination
Magneticdiffusion:Scalability,reliability,andQoSofdata disseminationmechanismsforwirelesssensornetworks 2482
Data filtering.
Enhancing network traffic prediction and anomaly detection via statistical network traffic separation and combination strategies 1627
Data loss rate
QoS supporting and optimal energy allocation for a cluster based wireless sensor network 2569
Data multiplexing
Multi-user data multiplexing for digital multimedia broadcasting 3970
Data propagation
A new energy efficient and fault-tolerant protocol for data propagation in smart dust networks using varying transmission range 477
Data-centric
HDA: A hierarchical data aggregation scheme for sensor networks 1292
Data-link layer performance evaluation model
Loss performance model for wireless channels with autocorrelated arrivals and losses 2646
D-BMAP
An integrated model of packetized VBR teletraffic source for cellular NG All-IP wireless networks 957
802.11 DCF
End-to-end delay analysis and admission control in 802.11 DCF WLANs 842
DCO
Clock recovery based on packet inter-arrival time averaging 1696
DDoS attacks
Distributed packet pairing for reflector based DDoS attack mitigation 2269
DDoS defense
Load-balanced agent activation for value-added network services. 1905
Decentralized
Analysis of decentralized resource and service discovery mechanisms in wireless multi-hop networks 2710
Degree and delay constraints
Genetic algorithm for delay- and degree-constrained multimedia broadcasting on overlay networks 3625
Delay
Application layer multicast tree for real-time media delivery 1480
Delay and jitter
Loss and Delay Measurements of Internet Backbones 1590
Delay bound
Dynamic multicast routing under delay constraints in WDM networks with heterogeneous light splitting capabilities 1492
Delay guarantees
End-to-end delay analysis and admission control in 802.11 DCF WLANs 842
Delay performance analysis
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
Delay spike
TCP performance in wireless networks with delay spike and different initial congestion window sizes 926
Denial of service
Application of anomaly detection algorithms for detecting SYN flooding attacks 1433
Dependability
A new dependable exchange protocol 2770
Dependability
Transformations for write-all-with-collision model 183
Deployments
SCON: Secure management of continuity in sensor networks 2458
Description logics
Description logics for an autonomic IDS event analysis system 2841
Deterministic end-to-end queuing delay
End-to-end QoS guarantees for a network based on Latency-Rate Max–Min service curve 3833
Development and implementation
On content delivery network implementation 2396
DHT
MULTI+: A robust and topology-aware peer-to-peer multicast service 900
Differentiated service
Energy-efficient differentiated directed diffusion (EDDD) in wireless sensor networks 231
Differentiated service Internet
Anatomy of delay performance for the strict priority scheduling scheme in multi-service Internet 69
Differentiated Services
Dynamic Application Profiles using Neural Networks for adaptive quality of service support in the Internet 2985
Differentiated services
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
Differentiated Services
Service differentiation with MEDF scheduling in TCP/IP networks 812
Differentiated services (DiffServ)
A combined delay and throughput proportional scheduling scheme for differentiated services 1754
DiffServ
The effects of AQM on the performance of Assured Forwarding Service 2294
DiffServ
SIP-based Qos support architecture and session management in a combined IntServ and DiffServ networks 2996
DiffServ
Two different approaches for providing QoS in the Internet backbone 3957
DiffServ
Harmonic DiffServ: Scalable support of IP multicast with Qos heterogeneity in DiffServ backbone networks 1780
Diff-Serv
Performance evaluation of subflow capable SCTP 2413
DiffServ/MPLS networks
A generic architecture for autonomic service and network management 3691

DiffServ-aware traffic engineering (DS-TE)
Minimizing preemption cost for path selection in Diffserv-ware MPLS networks 3825
Digital multimedia broadcasting
Multi-user data multiplexing for digital multimedia broadcasting 3970
Digital signature
Some common attacks against certified email protocols and the countermeasures 2759
Digitally controlled oscillator
Clock recovery based on packet inter-arrival time averaging 1696
Directed diffusion
Energy-efficient differentiated directed diffusion (EDDD) in wireless sensor networks 231
Directed diffusion
HDA: A hierarchical data aggregation scheme for sensor networks 1292
Directory-enabled networks
Economical protection in MPLS networks 402
Distributed algorithm
An iterative distributed algorithm for multi-constraint multicast routing 3647
Distributed Hash Table (DHT)
EpiChord: Parallelizing the Chord lookup algorithm with reactive routing state management 1243
Distributed networks
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Distributed parallel algorithm
A new generalized particle approach to parallel bandwidth allocation 3933
Distributed path marking methods
Optimized QoS priority routing for service tunability and overhead reduction using swarm based active network scheme 765
Distributed servers
Optimal assignment of distributed servers to virtual partitionsfor the provision of immersive voice communicationin massively multiplayer games 1260
Distributed systems
Counter-based reliability optimization for gossip-based broadcasting 1516
Distributed Virtual Environments
A network-centric approach to enhancing the interactivity of large-scale distributed virtual environments 3553
Distribution overlay
From content distribution networks to content networks – issues and challenges 551
Drift
On estimating clock skew for one-way measurements 1213
Drop policy
A rate-based drop policy for punishing unresponsive flows 1868
DSCP
Harmonic DiffServ: Scalable support of IP multicast with Qos heterogeneity in DiffServ backbone networks 1780
DSDV
SIP-based MIP6-MANET: Design and implementation of mobile IPv6 and SIP-based mobile ad hoc networks 1226
Dual failures
Improving signaling recovery in shared mesh optical networks 59
Dual-Homed
Survivable IP network realization in IP-over-WDM networks under overlay model 1772
Dual-stack
IPv6 deployment: Real time applications and QoS aspects 1393
Duplicate address detection
Care-of address provisioning for efficient IPv6 mobility support 1422
DVB
Dynamic bandwidth allocation for efficient support of concurrent digital TV and IP multicast services in DVB-T networks 741
DVB
Service-driven inter-domain QoS monitoring system for large-scale IP and DVB networks 1687
Dynamic Application Profiles
Dynamic Application Profiles using Neural Networks for adaptive quality of service support in the Internet 2985
Dynamic bandwidth allocation
On the fairness of dynamic bandwidth allocation schemes in Ethernet passive optical networks 2123
Dynamic bandwidth allocation
Energy efficient feedback-based scheduler for delay guarantees in IEEE 802.11e networks 2680
Dynamic bandwidth allocation
Dynamic bandwidth allocation for Internet telephony 3710
Dynamic buffer reconfiguration
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Dynamic cache size tuning
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
Dynamic channel assignment
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Dynamic code assignment
Efficient OVSF code assignment and reassignment strategies in UMTS 1538
Dynamic location management
Modeling location management in wireless networks with generally distributed parameters 2386
Dynamic memory allocator
Reducing memory fragmentation in network applications with dynamic memory allocators optimized for performance 2612
Dynamic Programming
An efficient parallel optimization algorithm for the Token Bucket control mechanism 2281
Dynamic protocol stack
Design and implementation of a dynamic protocol framework 1309
Dynamic resource allocation
An observation-based approach towards self-managing web servers 1174
Dynamic resource management
Dynamic resource management for QoS provisioning over next-generation IP-based wireless networks 730

Dynamic Service Negotiation
Design and implementation of Dynamic Service Negotiation Protocol (DSNP) 3250
Dynamical process
A new generalized particle approach to parallel bandwidth allocation 3933

E-commerce
A new dependable exchange protocol 2770
EDCA
A performance study on service integration in IEEE 802.11E wireless LANs 2621
Efficiency
An efficient auction-based mechanism for hierarchically structured bandwidth markets 911
EFSM
Interactive Transparent Networking: Protocol meta modeling based on EFSM 3536
Electronic commerce
SSL/TLS session-aware user authentication – Or how to effectively thwart the man-in-the-middle 2238
Electronic commerce
Protection of a mobile agent with a reference clone 268
Electronic mail
An anti-spam scheme using pre-challenges 2739
e-lottery
Practical electronic lotteries with offline TTP 2830
E-MACSC
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
Embedded swarm-based agents
Optimized QoS priority routing for service tunability and overhead reduction using swarm based active network scheme 765
Encryption
Securing bulk content almost for free 280
End System Multicast routing
End System Multicast routing for multi-party videoconferencing applications 2046
End-to-end performance
Evaluating IPv6 on a large-scale network 3113
End-User Application Toolkit
Dynamic Application Profiles using Neural Networks for adaptive quality of service support in the Internet 2985
Energy conserving
Silent networking for energy-constrained nodes 3445
Energy diffserv
An energy diffserv and application-aware MAC scheduling for VBR streaming video in the IEEE 802.15.3 high-rate wireless personal area networks 3516
Energy efficiency
Energy efficient information dissemination protocols by negotiation for wireless sensor networks 2136
Energy efficiency
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Energy efficiency
An SPT-based topology control algorithm for wireless ad-hoc networks 3092
Energy efficiency
Energy efficiency of collision resolution protocols 3397
Energy efficiency
Nonlinear optimization for energy efficiency in IEEE 802.11a wireless LANs 3455
Energy efficiency
Energy efficient routing and scheduling for real-time data aggregation in WSNs 3527
Energy efficiency
TAP: Traffic-aware topology control in on-demand ad hoc networks 3877
Energy efficiency
Energy-efficient coverage problems in wireless ad-hoc sensor networks 413
Energy efficient algorithms
On the construction of energy-efficient maximum residual battery capacity broadcast trees in static ad hoc wireless networks 93
Energy-aware systems
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Energy-balancing
Energy-efficient differentiated directed diffusion (EDDD) in wireless sensor networks 231
Energy-efficient
Design of a distributed energy-efficient clustering algorithm for heterogeneous wireless sensor networks 2230
Energy-efficient
Distributed and energy-efficient target localization and tracking in wireless sensor networks 2494
Energy-efficient scheduling
Energy-efficient scheduling and hybrid communication architecture for underwater littoral surveillance 3354
Energy-efficient scheduling
Blue-Park: Energy-efficient operation of Bluetooth networks using park mode 3416
Energy-fair scheduling
Blue-Park: Energy-efficient operation of Bluetooth networks using park mode 3416
Enhanced Distributed Channel Access
A simple recursive scheme for adjusting the contention window size in IEEE 802.11e wireless ad hoc networks 3789
Entropy
An entropy-constrained algorithm for routing of communication networks 3182
Entropy-constrained routing
An entropy-constrained aigorithm for routing of communication networks 3182
Epidemic
Counter-based reliability optimization for gossip-based broadcasting 1516
Epidemic algorithms
A comparison of epidemic algorithms in wireless sensor networks 2450
Equal sharing
Adaptive packet marking for achieving fairness in DiffServ networks 52
Error resilience
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Estimation
Estimating the source-destination traffic matrix of a VPN from access-link loads 3663

Ethernet
Design and development of Ethernet-based storage area network protocol 1271
Ethernet passive optical network
On the fairness of dynamic bandwidth allocation schemes in Ethernet passive optical networks 2123
Exchange protocol
A new dependable exchange protocol 2770
Experiments
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
Explicit rate
A consolidation algorithm for multicast service using proportional control and neural network predictive techniques 114
Explicit routing
Explicit routing in multicast overlay networks 2201
Extensibility
Study on the extensibility of video conferencing with speech mixing 2026
Extension header
Extension headers for IPv6 anycast 3013

Face routing
Efficient and robust geocasting protocols for sensor networks 151
Failover
Retransmission policies for multihomed transport protocols 1798
Failure detection
Retransmission policies for multihomed transport protocols 1798
Fair exchange
Some common attacks against certified email protocols and the countermeasures 2759
Fairness
A new dependable exchange protocol 2770
Fairness
Analyzing the performance and fairness of BitTorrent-like networks using a general fluid model 3946
Fairness
Adaptive packet marking for achieving fairness in DiffServ networks 52
Fairness
Study on nominee selection for multicast congestion control 1458
false alarm
How many sensors for an acceptable breach detection probability 173
False alarm
Self-monitoring of wireless sensor networks 462
False sharing
Performance evaluation of subflow capable SCTP 2413
Fast handover
Flow-based fast handover for mobile IPv6 environment – implementation and analysis 3051
Fast handover
Care-of address provisioning for efficient IPv6 mobility support 1422
Fault restoration
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921
Fault tolerance
A new dependable exchange protocol 2770
Fault tolerance
INSENS: Intrusion-tolerant routing for wireless sensor networks 216
Fault tolerance
An incremental approach to IPv6 multihoming 582
Fault tolerance
A self-organizable topology maintenance protocol for mobile group communications in mobile next-generation networks 1730
Fault tolerance
MultiGate6: An IPv6 multihoming gateway using a hybrid approach 1842
Fault-tolerance
Relay node placement in large scale wireless sensor networks 490
Feedback control
Energy efficient feedback-based scheduler for delay guarantees in IEEE 802.11e networks 2680
Feedback control
An integrated approach with feedback control for robust Web QoS design 3158
FFHMIPv6
Flow-based fast handover for mobile IPv6 environment – implementation and analysis 3051
FIFO queue
Modeling and analysis of queuing handoff calls in single and two-tier cellular networks 3580
Filtering
Dynamic bandwidth reservation for label switched paths: An on-line predictive approach 3265
Firewall
Online adaptive firewall allocation in internet data center 1858
Firewalls
Implementation of an IPv6 multicast firewall testbed 3079
Flash flows
Characteristic analysis of internet traffic from the perspective of flows 1639
Flooding
Modeling the performance of flooding in wireless multi-hop Ad hoc networks 949
Flooding
Recycled path routing in mobile ad hoc networks 1552
Flow aggregation
An efficient traffic engineering approach based on flow distribution and splitting in MPLS networks 1284
Flow label
IPv6 deployment: Real time applications and QoS aspects 1393
Flow level performance
A performance study on service integration in IEEE 802.11E wireless LANs 2621
Flow shaping
An efficient traffic engineering approach based on flow distribution and splitting in MPLS networks 1284

Flow splitting
An efficient traffic engineering approach based on flow distribution and splitting in MPLS networks 1284
Fluid model
Analyzing the performance and fairness of BitTorrent-like networks using a general fluid model 3946
FMIPv6
Seamless multicast mobility support using fast MIPv6 extensions 3745
Forecasting
Dynamic bandwidth reservation for label switched paths: An on-line predictive approach 3265
Formal methods
Achieving dependability in sensor networks through automated requirements-based programming 246
Formal specification
The importance of proofs of security for key establishment protocols. 2788
Forward error correction
Securing bulk content almost for free 280
Forwarding database
A topology discovery algorithm for sensor network using smart antennas 2261
Fractals
Stochastic processes for computer network traffic modeling 1
Fractional stable motion
Stochastic processes for computer network traffic modeling 1
Frame-based scheduler
Frame-counter scheduler: A novel QoS scheduler for real-time traffic 2181
Fuzzy logic
Dynamic server selection using fuzzy inference in content distribution networks 1026

3G
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945
3G networks
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
4G networks
Seamless continuity of PS-services in WLAN/3G interworking 1055
GBN
A comparison of stop-and-wait and go-back-N ARQ schemes for IEEE 802.11e wireless infrared networks 1015
Generalized particle (GP)
A new generalized particle approach to parallel bandwidth allocation 3933
Genetic algorithm
Construction of an optimal multicast tree for group communication in a cellular network using genetic algorithm 3306
Genetic algorithm
Genetic algorithm for delay- and degree-constrained multimedia broadcasting on overlay networks 3625
Genetic Algorithms
Efficient heuristic algorithms for correcting the Cascade Vulnerability Problem for interconnected networks 2109
Geocasting
Efficient and robust geocasting protocols for sensor networks 151
Geographic grid-based multicasting
Query slipping prevention for trajectory-based publishing and subscribing in wireless sensor networks 1979
Geographic protocols
Efficient and robust geocasting protocols for sensor networks 151
Geographically distributed server architecture
A network-centric approach to enhancing the interactivity of large-scale distributed virtual environments 3553
GeoSENS
GeoSENS: geo-based sensor network secure communication protocol 456
Global fairness
Service index-based fairness scheduling in wireless ad hoc networks 2934
Global positioning system
A reliable on-demand routing protocol for mobile ad hoc networks with mobility prediction 123
GMPLS
A novel method for QoS provisioning with protection in GMPLS networks 757
Gossip
Counter-based reliability optimization for gossip-based broadcasting 1516
GPRS
An approach for seamless handoff among mobile WLAN/GPRS integrated networks 32
GPRS
A study on switching voice traffic seamlessly between GSM and GPRS cellular networks 1079
GPRS
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
GPRS networks
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Group communications
A self-organizable topology maintenance protocol for mobile group communications in mobile next-generation networks 1730
Group membership
A self-organizable topology maintenance protocol for mobile group communications in mobile next-generation networks 1730
GSD
PCPGSD: An enhanced GSD service discovery protocol for MANETs 2433
Guaranteed delivery
Localized routing with guaranteed delivery and a realistic physical layer in wireless sensor networks 2550
Guaranteed service
The service curve service discipline for the rate-controlled EDF service discipline in variable-sized packet networks 3886

H.263 traffic modeling
A study of H.263 traffic modeling in multipoint videoconference sessions over IP networks 372

Hamming distance
Multicast-based inference for topology and network-internal loss performance from end-to-end measurements 1936
Handoff
Mobility management across hybrid wireless networks: Trends and challenges 1363
Handoff
Multi-threshold bandwidth reservation scheme of an integrated voice/data wireless network 1504
Handoff calls
Modeling and analysis of queuing handoff calls in single and two-tier cellular networks 3580
Handoffs
Performance evaluation of a novel scheme for QoS provision in UTRA TDD 969
Handover
Location assisted fast vertical handover for UMTS/WLAN overlay networks 2601
Handover
A flexible handover mechanism for seamless service continuity in heterogeneous environments 717
Hardware
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Hash
Secure remote user access over insecure networks 660
HCCA
Prioritized support of different traffic classes in IEEE 802.11e wireless LANs 2867
Health monitoring
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Heterogeneous
Mobility management across hybrid wireless networks: Trends and challenges 1363
Heterogeneous environment
Design of a distributed energy-efficient clustering algorithm for heterogeneous wireless sensor networks 2230
Heterogeneous systems
A flexible handover mechanism for seamless service continuity in heterogeneous environments 717
Heuristic algorithm
An iterative distributed algorithm for multi-constraint multicast routing 3647
Heuristics
Optimal assignment of distributed servers to virtual partitionsfor the provision of immersive voice communicationin massively multiplayer games 1260
Hierarchical allocation
An efficient auction-based mechanism for hierarchically structured bandwidth markets 911
Hierarchical data aggregation
HDA: A hierarchical data aggregation scheme for sensor networks 1292
Hierarchical Mobile IPv6
An adaptive mobility anchor point selection scheme in Hierarchical Mobile IPv6 networks 3066
Hierarchical routing
Two-layer hierarchical wavelength routing for islands of transparency optical networks 2952
High bandwidth flow detection
Improvement of LRU cache for the detection and control of long-lived high bandwidth flows 103
HofA
Flow-based fast handover for mobile IPv6 environment – implementation and analysis 3051
Homomorphic e-auction
Batch verification of validity of bids in homomorphic e-auction 2798
Hot-video broadcasting
A smooth broadcasting scheme for VBR-encoded hot videos 2904
Hybrid routing
Hybrid routing in next generation IP networks 879
Hybrid wireless
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
HyperSCSI
Design and development of Ethernet-based storage area network protocol 1271

I/O bandwidth
A client-assisted interval caching strategy for video-on-demand systems 3780
ICMPv6
MultiGate6: An IPv6 multihoming gateway using a hybrid approach 1842
IEEE 802.11e
A performance study on service integration in IEEE 802.11E wireless LANs 2621
IEEE 802.11
Efficient and fast retransmission for wireless networks 2964
IEEE 802.11
Overcoming the IEEE 802.11 paradox for realtime multimedia traffic 3507
IEEE 802.11
An experimental performance analysis of MAC multicast in 802.11b networks for VoIP traffic 938
IEEE 802.11
A comparison of stop-and-wait and go-back-N ARQ schemes for IEEE 802.11e wireless infrared networks 1015
IEEE 802.11 MAC
Nonlinear optimization for energy efficiency in IEEE 802.11a wireless LANs 3455
IEEE 802.11a PHY
Nonlinear optimization for energy efficiency in IEEE 802.11a wireless LANs 3455
IEEE 802.11e
Prioritized support of different traffic classes in IEEE 802.11e wireless LANs 2867
IEEE 802.11e
A simple recursive scheme for adjusting the contention window size in IEEE 802.11e wireless ad hoc networks 3789
IEEE 802.15.3 MAC
An energy diffserv and application-aware MAC scheduling for VBR streaming video in the IEEE 802.15.3 high-rate wireless personal area networks 3516
IEEE Std 802.15.4
Performance limitations of the MAC layer in 802.15.4 low rate WPAN 2534

IEPM
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
Images Transport
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
Immersive voice communication
Optimal assignment of distributed servers to virtual partitionsfor the provision of immersive voice communicationin massively multiplayer games 1260
Implicit acknowledgements
Cross-layer application-specific wireless sensor network design with single-channel CSMA MAC over sense-sleep trees 3425
Incentive compatibility
Constructing efficient peer-to-peer overlay topologies by adaptive connection establishment 3567
Incentive pricing scheme
Location-based incentive pricing for tree-based relaying in multi-hop cellular networks 3148
Incentives
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
Infinitely divisible cascade
Stochastic processes for computer network traffic modeling 1
Information dissemination
Energy efficient information dissemination protocols by negotiation for wireless sensor networks 2136
Infrastructure
An ACK-based polling strategy for supporting high performance and QoS in IEEE 802.11 wireless networks 358
Infrastructure mode
A power-saving scheduling for infrastructure-mode 802.11 wireless LANs 3483
Initial congestion window
TCP performance in wireless networks with delay spike and different initial congestion window sizes 926
Inline measurement
ImTCP: TCP with an inline measurement mechanism for available bandwidth 1614
Instantiating security
Secret instantiation in ad-hoc networks 200
Integer linear programming
Sleep scheduling for wireless sensor networks via network flow model 2469
Integrity
Protection of a mobile agent with a reference clone 268
Intelligent computational methods
QoS multicast routing for multimedia group communications using intelligent computational methods 2217
Intelligent networks
Secure distributed intelligent networks 325
Interactive TCP
Interactive Transparent Networking: Protocol meta modeling based on EFSM 3536
Interactive Transparent Networking
Interactive Transparent Networking: Protocol meta modeling based on EFSM 3536
Interactivity enhancement
A network-centric approach to enhancing the interactivity of large-scale distributed virtual environments 3553
Interconnection 3G/WLAN
Seamless continuity of PS-services in WLAN/3G interworking 1055
Inter-domain
End-to-end quality of service provisioning through inter-provider traffic engineering 683
Inter-domain measurement
A measurement framework for inter-domain SLA validation 703
Inter-domain monitoring
Service-driven inter-domain QoS monitoring system for large-scale IP and DVB networks 1687
Interference
Interference-based routing in multi-hop wireless infrastructures 2693
Interference environment
An adaptive bluetooth packet selection and scheduling scheme in interference environments 2084
Internet
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
Internet and multimedia traffic
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
Internet data center
Online adaptive firewall allocation in internet data center 1858
Internet gateway
Analysis and evaluation of a multiple gateway traffic-distribution scheme for gateway clusters 3170
Internet measurement
On the impact of loss and delay variation on Internet packet audio transmission 1578
Internet security
An anti-spam scheme using pre-challenges 2739
Internet Service Providers
End-site routing support for IPv6 multihoming1 893
Internet telephony
Assessed quality of service and voice and data integration: A case study 1992
Internet telephony
Dynamic bandwidth allocation for Internet telephony 3710
Internet traffic
Characteristic analysis of internet traffic from the perspective of flows 1639
Internet traffic measurement
Dynamic bandwidth reservation for label switched paths: An on-line predictive approach 3265
Inter-node relaying
Serialized optimal relay schedules in two-tiered wireless sensor networks 511
Inter-service time
Modeling location management in wireless networks with generally distributed parameters 2386
Intersystem roaming
An efficient location management scheme based on replication strategy for intersystem roaming in mobile wireless networks 3238

Interval caching
A client-assisted interval caching strategy for video-on-demand systems 3780
intra/inter-domain routing
Research challenges in QoS routing 563
Intrusion detection
Using attack graphs for correlating, hypothesizing, and predicting intrusion alerts 2917
Intrusion detection
Minimum-cost network hardening using attack graphs 3812
Intrusion Detection System
Description logics for an autonomic IDS event analysis system 2841
Intrusion prevention
Using attack graphs for correlating, hypothesizing, and predicting intrusion alerts 2917
Intrusion prevention
Minimum-cost network hardening using attack graphs 3812
Intrusion tolerance
INSENS: Intrusion-tolerant routing for wireless sensor networks 216
IntServ
SIP-based Qos support architecture and session management in a combined IntServ and DiffServ networks 2996
IP
An open source traffic engineering toolbox 593
IP
Dynamic bandwidth allocation for efficient support of concurrent digital TV and IP multicast services in DVB-T networks 741
IP
Service-driven inter-domain QoS monitoring system for large-scale IP and DVB networks 1687
IP address
AIPAC: Automatic IP address configuration in mobile ad hoc networks 1189
IP address lookup
High-speed IP address lookup using balanced multi-way trees 1927
IP address lookup
A fast and scalable IPv4 and 6 address lookup algorithm 3020
IP backbone networks
Loss and Delay Measurements of Internet Backbones 1590
IP flow monitoring
Design principles and algorithms for effective high-speed IP flow monitoring 1653
IP mobility
Target access router selection in advanced mobility scenarios 337
IP multicast
Seamless multicast mobility support using fast MIPv6 extensions 3745
IP multicast
Application layer multicast tree for real-time media delivery 1480
IP multicast
Harmonic DiffServ: Scalable support of IP multicast with Qos heterogeneity in DiffServ backbone networks 1780
IP network
Anatomy of delay performance for the strict priority scheduling scheme in multi-service Internet 69
IP packets
Packet-based burst queue modeling at an edge in optical-burst switched networks 634
IP telephony
On the impact of loss and delay variation on Internet packet audio transmission 1578
IP-over-WDM
Survivable IP network realization in IP-over-WDM networks under overlay model 1772
IPsec-based VPN
Dynamic and secure management of VPNs in IPv6 multi-domain scenarios 3122
IPv4
Evaluating IPv6 on a large-scale network 3113
IPv6
Extension headers for IPv6 anycast 3013
IPv6
A fast and scalable IPv4 and 6 address lookup algorithm 3020
IPv6
A scalable IPv6 route lookup scheme via dynamic variable-stride bitmap compression and path compression 3037
IPv6
Implementation of an IPv6 multicast firewall testbed 3079
IPv6
Evaluating IPv6 on a large-scale network 3113
IPv6
Dynamic and secure management of VPNs in IPv6 multi-domain scenarios 3122
IPv6
An incremental approach to IPv6 multihoming 582
IPv6
IPv6 deployment: Real time applications and QoS aspects 1393
IPv6
Care-of address provisioning for efficient IPv6 mobility support 1422
IPv6
MultiGate6: An IPv6 multihoming gateway using a hybrid approach 1842
IPv6 multicast
Scalable MPEG-4 streaming over the IPv6 mobile network environment 3104
IR reservation
A dynamic approach to reduce preemption in book-ahead reservation in QoS-enabled networks 1443
IS-41
Performance analyses of three geography-based location strategies for PCS networks 3327
ISDN
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
Island of transparency
Two-layer hierarchical wavelength routing for islands of transparency optical networks 2952

Jitter
Clock recovery based on packet inter-arrival time averaging 1696

Kalman filtering
Speed control and policing in a cellular mobile network: SpeedNet 3633
Key management
SCON: Secure management of continuity in sensor networks 2458

Label switched path
LSP protection for delay-differentiated dynamic traffic in IP-over-WDM networks with port constraints 1402
Latency-Rate Max–Min service curve
End-to-end QoS guarantees for a network based on Latency-Rate Max–Min service curve 3833
Layer adaptation controls
Differentiated object priority control mechanism for MPEG-4 streaming 1522
Layered multicast
A new TCP-friendly prioritized video multicast protocol using SPLIT protocol 1110
Layered video
Cross-layer conditional retransmission for layered video streaming over cellular networks 2066
Layered video
A new TCP-friendly prioritized video multicast protocol using SPLIT protocol 1110
LDAP
Economical protection in MPLS networks 402
Learning Automata
Performance optimization of an adaptive wireless push system in environments with locality of demand 2542
Least hop(s)
Finding a least hop(s) path subject to multiple additive constraints 392
Lifetime
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Lifetime
Maximum lifetime rate control and random access in multi-hop wireless networks 3844
Lifetime
On the lifetime of large scale sensor networks 502
Lifetime extension
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Light splitting capacity
Dynamic multicast routing under delay constraints in WDM networks with heterogeneous light splitting capabilities 1492
lightpath services
Survivable IP network realization in IP-over-WDM networks under overlay model 1772
Limited energy resource
On the construction of energy-efficient maximum residual battery capacity broadcast trees in static ad hoc wireless networks 93
Linear congruential generator
A lightweight secure protocol for wireless sensor networks 2556
Linear topology
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
Link adaptation
Nonlinear optimization for energy efficiency in IEEE 802.11a wireless LANs 3455
Link failure
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921
Linux
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
LIOA
Hybrid routing in next generation IP networks 879
Little's law
A robust packet scheduling algorithm for proportional delay differentiation services 3679
Little's result
A combined delay and throughput proportional scheduling scheme for differentiated services 1754
Load balancing
Load-balanced agent activation for value-added network services. 1905
Load balancing
MultiGate6: An IPv6 multihoming gateway using a hybrid approach 1842
Local fairness
Service index-based fairness scheduling in wireless ad hoc networks 2934
Local route maintenance
Multipath passive data acknowledgement on-demand multicast protocol 2074
Locality of demand
Performance optimization of an adaptive wireless push system in environments with locality of demand 2542
Localized algorithm
Localized routing with guaranteed delivery and a realistic physical layer in wireless sensor networks 2550
Localized algorithm
An SPT-based topology control algorithm for wireless ad-hoc networks 3092
Location area
Modeling location management in wireless networks with generally distributed parameters 2386
Location management
An efficient location management scheme based on replication strategy for intersystem roaming in mobile wireless networks 3238
Location registration
Performance analyses of three geography-based location strategies for PCS networks 3327
Location tracking
Speed control and policing in a cellular mobile network: SpeedNet 3633
Location update
Modeling location management in wireless networks with generally distributed parameters 2386
Location-aware sensor networks
Query slipping prevention for trajectory-based publishing and subscribing in wireless sensor networks 1979
Location-based pricing
Location-based incentive pricing for tree-based relaying in multi-hop cellular networks 3148

Location-centric
HDA: A hierarchical data aggregation scheme for sensor networks 1292
Logical tree
A combined group/tree approach for scalable many-to-many reliable multicast 3863
Long-range dependence
Stochastic processes for computer network traffic modeling 1
Loss
Loss and Delay Measurements of Internet Backbones 1590
Loss probability
Refined approximations for performance analysis and optimization of queueing model with guard channels for handovers in cellular networks 1386
Loss rate
Multicast-based inference for topology and network-internal loss performance from end-to-end measurements 1936
Loss rate constraint
Stochastic model and analysis for capacity optimization in communication networks 2377
Low energy
Silent networking for energy-constrained nodes 3445
LSP setup
A novel method for QoS provisioning with protection in GMPLS networks 757

M^3RT
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
MAC
Efficient and fast retransmission for wireless networks 2964
MAC multicast
An experimental performance analysis of MAC multicast in 802.11b networks for VoIP traffic 938
MAC protocol
Overcoming the IEEE 802.11 paradox for realtime multimedia traffic 3507
MAC protocol
Dynamic cell-based MAC protocol for target detection applications in energy-constrained wireless networks 429
MACSC
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
MANET
PCPGSD: An enhanced GSD service discovery protocol for MANETs 2433
MANET
A simple recursive scheme for adjusting the contention window size in IEEE 802.11e wireless ad hoc networks 3789
MANET
AIPAC: Automatic IP address configuration in mobile ad hoc networks 1189
Man-in-the-middle attack
SSL/TLS session-aware user authentication – Or how to effectively thwart the man-in-the-middle 2238
Many-to-many session
A combined group/tree approach for scalable many-to-many reliable multicast 3863
MAP selection scheme
An adaptive mobility anchor point selection scheme in Hierarchical Mobile IPv6 networks 3066
Markov chains
Modeling and analysis of queuing handoff calls in single and two-tier cellular networks 3580
Mathematical programming
Maximum lifetime rate control and random access in multi-hop wireless networks 3844
Mathematical programming/optimization
Locating network monitors: Complexity, heuristics, and coverage 1564
Maximum coverage problem
Locating network monitors: Complexity, heuristics, and coverage 1564
M-commerce
Secure brokerage mechanisms for mobile electronic commerce 2308
MCU
A study of H.263 traffic modeling in multipoint videoconference sessions over IP networks 372
Measurement-based admission control
Management and admission control based on policies and measurements for the packet-switched domain of the UMTS core network 3214
Measurements
Loss and Delay Measurements of Internet Backbones 1590
Medium access control
Prioritized support of different traffic classes in IEEE 802.11e wireless LANs 2867
Medium access control
Cross-layer application-specific wireless sensor network design with single-channel CSMA MAC over sense-sleep trees 3425
Medium access control
A high performance MAC protocol for broadcast LANs with bursty traffic 944
Medium access control (MAC)
Maximum lifetime rate control and random access in multi-hop wireless networks 3844
Medium access control protocols
Performance limitations of the MAC layer in 802.15.4 low rate WPAN 2534
Memory access
High-speed IP address lookup using balanced multi-way trees 1927
Memory fragmentation
Reducing memory fragmentation in network applications with dynamic memory allocators optimized for performance 2612
Mesh network
Interference-based routing in multi-hop wireless infrastructures 2693
Metadata
From content distribution networks to content networks – issues and challenges 551
Micro-mobility
Macro/micro-mobility fast handover in hierarchical mobile IPv6 611
Minimum cost outflow constrained spanning trees
End System Multicast routing for multi-party videoconferencing applications 2046

Minimum cost problem
Locating network monitors: Complexity, heuristics, and coverage 1564
Mobile
Scalable MPEG-4 streaming over the IPv6 mobile network environment 3104
Mobile Ad Hoc Network
SIP-based MIP6-MANET: Design and implementation of mobile IPv6 and SIP-based mobile ad hoc networks 1226
Mobile ad hoc networks
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
Mobile ad hoc networks
A reliable on-demand routing protocol for mobile ad hoc networks with mobility prediction 123
Mobile ad hoc networks
Improve routing trust with promiscuous listening routing security algorithm in mobile ad hoc networks 1121
Mobile ad hoc networks
Recycled path routing in mobile ad hoc networks 1552
Mobile ad hoc networks (MANETs)
Dynamic bandwidth allocation for QoS routing on TDMA-based mobile ad hoc networks 1316
Mobile agent
Secure brokerage mechanisms for mobile electronic commerce 2308
Mobile agent
Protection of a mobile agent with a reference clone 268
Mobile agents
Secure distributed intelligent networks 325
Mobile cellular network
SIM-based subscriber authentication mechanism for wireless local area networks 1744
Mobile communication
Taxonomy and survey of RFID anti-collision protocols 2150
Mobile communication systems
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Mobile computing
CAEM: A channel adaptive approach to energy management for wireless sensor networks 3343
Mobile devices
Silent networking for energy-constrained nodes 3445
Mobile IPv6
Flow-based fast handover for mobile IPv6 environment – implementation and analysis 3051
Mobile IPv6
SIP-based MIP6-MANET: Design and implementation of mobile IPv6 and SIP-based mobile ad hoc networks 1226
Mobile IPv6
Care-of address provisioning for efficient IPv6 mobility support 1422
Mobile multimedia
Ad hoc quality of service multicast routing 136
Mobile network
Construction of an optimal multicast tree for group communication in a cellular network using genetic algorithm 3306
Mobile wireless
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945
Mobility
On scalability properties of the Hi3 control plane 3591
Mobility
An integrated model of packetized VBR teletraffic source for cellular NG All-IP wireless networks 957
Mobility
Mobility management across hybrid wireless networks: Trends and challenges 1363
Mobility anchor point
An adaptive mobility anchor point selection scheme in Hierarchical Mobile IPv6 networks 3066
Mobility anchor point
Macro/micro-mobility fast handover in hierarchical mobile IPv6 611
Mobility management
Flow-based fast handover for mobile IPv6 environment – implementation and analysis 3051
Mobility management
Seamless multicast mobility support using fast MIPv6 extensions 3745
Mobility model
Analysis of a topology control paradigm in WLAN/WPAN environments 2096
Mobility modeling
Speed control and policing in a cellular mobile network: SpeedNet 3633
Mobility prediction
A reliable on-demand routing protocol for mobile ad hoc networks with mobility prediction 123
Model conversions
Transformations for write-all-with-collision model 183
Model predictive control
Adaptive model predictive TCP delay-based congestion control 1963
Modeling and simulation
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Modeling and simulation
Performance evaluation of a novel scheme for QoS provision in UTRA TDD 969
Modulation scaling
An integrated energy aware wireless transmission system for QoS provisioning in wireless sensor network 162
Monitoring
Self-monitoring of wireless sensor networks 462
Monitoring
On the impact of loss and delay variation on Internet packet audio transmission 1578
MPEG-4
Differentiated object priority control mechanism for MPEG-4 streaming 1522
MPEG-4 scalable streaming
Scalable MPEG-4 streaming over the IPv6 mobile network environment 3104
MPEG-4 videoconference streams
A fully dynamic scheduling mechanism for multimedia integration in next generation wireless networks 1823
MPLS
Economical protection in MPLS networks 402
MPLS
An open source traffic engineering toolbox 593

MPLS
An efficient traffic engineering approach based on flow distribution and splitting in MPLS networks 1284
MPLS
Efficiency and quality of service issues in MPLS transport for the UMTS access network 820
MPLS traffic engineering
Traffic engineering with OSPF-TE and RSVP-TE: Flooding reduction techniques and evaluation of processing cost 2034
Multi constraints
Construction of an optimal multicast tree for group communication in a cellular network using genetic algorithm 3306
Multicast
Multipath passive data acknowledgement on-demand multicast protocol 2074
Multicast
Explicit routing in multicast overlay networks 2201
Multicast
An adaptive multirate congestion control protocol for multicast communications 2247
Multicast
QoS multicast routing using Explore Best Path 2881
Multicast
Implementation of an IPv6 multicast firewall testbed 3079
Multicast
An iterative distributed algorithm for multi-constraint multicast routing 3647
Multicast
Target access router selection in advanced mobility scenarios 337
Multicast
MULTI+: A robust and topology-aware peer-to-peer multicast service 900
Multicast
Overlay subgroup communication in large-scale multicast applications 1201
Multicast
Study on nominee selection for multicast congestion control 1458
Multicast availability
Practical utilities for monitoring multicast service availability 1675
Multicast congestion control
A consolidation algorithm for multicast service using proportional control and neural network predictive techniques 114
Multicast cost
Dynamic multicast routing under delay constraints in WDM networks with heterogeneous light splitting capabilities 1492
Multicast dissemination
A self-organizable topology maintenance protocol for mobile group communications in mobile next-generation networks 1730
Multicast monitoring
Practical utilities for monitoring multicast service availability 1675
Multicast network
Multicast-based inference for topology and network-internal loss performance from end-to-end measurements 1936
Multicast OVPN
Optimal placement of multicast and wavelength converting nodes in multicast optical virtual private network 2169
Multicast request
Dynamic multicast routing under delay constraints in WDM networks with heterogeneous light splitting capabilities 1492
Multicast routing
Ad hoc quality of service multicast routing 136
multicast routing
Research challenges in QoS routing 563
Multicast routing
Core-selection algorithms in multicast routing - comparative and complexity analysis 998
Multicast routing tree
An iterative distributed algorithm for multi-constraint multicast routing 3647
Multicast tree
QoS multicast routing for multimedia group communications using intelligent computational methods 2217
Multicasting
A case for tree evolution in QoS multicasting. 2004
Multi-channel multicast delivery
Utilizing multi-channel multicast to provide scheduled video delivery 1833
Multicode
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
Multi-constrained minimum Steiner tree
A multi-constrained multicast QoS routing algorithm 1811
Multi-constrained multicast routing
A multi-constrained multicast QoS routing algorithm 1811
Multi-dimension Markov model
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Multifractal traffic modeling
Estimation of multifractal parameters in traffic measurement: An accuracy-based real-time approach 1879
Multifractals
Stochastic processes for computer network traffic modeling 1
Multihomed site
End-site routing support for IPv6 multihoming1 893
Multihoming
An incremental approach to IPv6 multihoming 582
Multihoming
Retransmission policies for multihomed transport protocols 1798
Multihoming
MultiGate6: An IPv6 multihoming gateway using a hybrid approach 1842
Multihop
Performance analysis of resource allocation in wireless multihop networks 983
Multi-hop
Modeling the performance of flooding in wireless multi-hop Ad hoc networks 949
Multi-hop cellular
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
Multi-hop cellular networks
Location-based incentive pricing for tree-based relaying in multi-hop cellular networks 3148

Multi-hop networks
Analysis of decentralized resource and service discovery mechanisms in wireless multi-hop networks 2710
Multimedia
Design and implementation of a dynamic protocol framework 1309
Multimedia broadcasting
Genetic algorithm for delay- and degree-constrained multimedia broadcasting on overlay networks 3625
Multimedia communications
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
Multimedia content
From content distribution networks to content networks — issues and challenges 551
Multimedia group communications
QoS multicast routing for multimedia group communications using intelligent computational methods 2217
Multimedia integration
A fully dynamic scheduling mechanism for multimedia integration in next generation wireless networks 1823
Multimedia layer
Multi-user data multiplexing for digital multimedia broadcasting 3970
Multimedia streaming
Differentiated object priority control mechanism for MPEG-4 streaming 1522
Multimedia WLANs
An ACK-based polling strategy for supporting high performance and QoS in IEEE 802.11 wireless networks 358
Multimode
Mobility management across hybrid wireless networks: Trends and challenges 1363
Multi-operator
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945
Multipath
Multipath passive data acknowledgement on-demand multicast protocol 2074
Multi-path constrained problem
A multi-constrained multicast QoS routing algorithm 1811
Multi-path routing
QoS differentiation in optical packet-switched networks 855
Multiple access control
A fully dynamic scheduling mechanism for multimedia integration in next generation wireless networks 1823
Multiple access interference
The impact of Soft handoff on the uplink capacity in WCDMA systems 3804
Multiple additively constrained QoS routing
On selecting the cost function for source routing 3602
Multiple additively constrained QoS routing
Finding a least hop(s) path subject to multiple additive constraints 392
Multiple Channels
Near-optimal data allocation over multiple broadcast channels 1341
Multiple constraints
An iterative distributed algorithm for multi-constraint multicast routing 3647
Multiple-channels
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
Multiplexor
An efficient parallel optimization algorithm for the Token Bucket control mechanism 2281
Multipoint videoconference
A study of H.263 traffic modeling in multipoint videoconference sessions over IP networks 372
Multiprotocol
A dynamic signaling mechanism based on symbiotic packet processing 77
multi-protocol label switching
LSP protection for delay-differentiated dynamic traffic in IP-over-WDM networks with port constraints 1402
Multirate
An adaptive multirate congestion control protocol for multicast communications 2247
Multi-service
System-level performance evaluation of UMTS with multi-service 1470
Multi-threshold scheme
Multi-threshold bandwidth reservation scheme of an integrated voice/data wireless network 1504
Multi-user
Multi-user data multiplexing for digital multimedia broadcasting 3970
Multi-way tree
High-speed IP address lookup using balanced multi-way trees 1927
Mutual authentication and key establishment protocols
The importance of proofs of security for key establishment protocols. 2788

Near video-on-demand (VOD)
A broadcasting scheme with supporting VCR functions for near video-on-demand systems 257
6NET
IPv6 deployment: Real time applications and QoS aspects 1393
Network
Incorporating trust and reputation in the DSR protocol for dependable routing 2806
Network
Implementation of an IPv6 multicast firewall testbed 3079
Network
Secure remote user access over insecure networks 660
Network
Applying 4-regular grid structures in large-scale access networks 1350
Network application
Reducing memory fragmentation in network applications with dynamic memory allocators optimized for performance 2612
Network architecture
On scalability properties of the Hi3 control plane 3591
Network bandwidth
Adaptive Segment based patching scheme for video streaming delivery system 1889
Network configuration
AIPAC: Automatic IP address configuration in mobile ad hoc networks 1189

Network connectivity
Optimized QoS priority routing for service tunability and overhead reduction using swarm based active network scheme 765
Network control
Dynamic bandwidth reservation for label switched paths: An on-line predictive approach 3265
Network Design
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
Network distance estimation
Estimation of network distances using off-line measurements 3295
Network flow
Routing and wavelength assignment for core-based tree in WDM networks 1896
Network flow model
Sleep scheduling for wireless sensor networks via network flow model 2469
Network lifetime
On the construction of energy-efficient maximum residual battery capacity broadcast trees in static ad hoc wireless networks 93
Network lifetime
Serialized optimal relay schedules in two-tiered wireless sensor networks 511
Network management
An open source traffic engineering toolbox 593
Network management
A novel method for QoS provisioning with protection in GMPLS networks 757
Network Management
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
Network measurement
On estimating clock skew for one-way measurements 1213
Network monitoring
Locating network monitors: Complexity, heuristics, and coverage 1564
Network monitoring
Enhancing network traffic prediction and anomaly detection via statistical network traffic separation and combination strategies 1627
Network optimization
An open source traffic engineering toolbox 593
Network performance
On the fairness of dynamic bandwidth allocation schemes in Ethernet passive optical networks 2123
Network protocols
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Network reliability
Economical protection in MPLS networks 402
Network security
Efficient heuristic algorithms for correcting the Cascade Vulnerability Problem for interconnected networks 2109
Network security
Distributed packet pairing for reflector based DDoS attack mitigation 2269
Network security
Description logics for an autonomic IDS event analysis system 2841
Network security
Application of anomaly detection algorithms for detecting SYN flooding attacks 1433
Network services
Dynamic resource management for QoS provisioning over next-generation IP-based wireless networks 730
Network Storage
Design and development of Ethernet-based storage area network protocol 1271
Network survivability
Economical protection in MPLS networks 402
network survivability
Survivable IP network realization in IP-over-WDM networks under overlay model 1772
Network topology
Energy-efficient scheduling and hybrid communication architecture for underwater littoral surveillance 3354
Network traffic measurements
Estimation of multifractal parameters in traffic measurement: An accuracy-based real-time approach 1879
Networked games
Optimal assignment of distributed servers to virtual partitionsfor the provision of immersive voice communicationin massively multiplayer games 1260
Neural Networks
Dynamic Application Profiles using Neural Networks for adaptive quality of service support in the Internet 2985
Next generation wireless networks
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
Next-generation wireless networks
Dynamic resource management for QoS provisioning over next-generation IP-based wireless networks 730
Neyman-Pearson detection
How many sensors for an acceptable breach detection probability 173
NG networks
An integrated model of packetized VBR teletraffic source for cellular NG All-IP wireless networks 957
Node failure
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921
Nominee selection
Study on nominee selection for multicast congestion control 1458
Nonlinear optimization
Nonlinear optimization for energy efficiency in IEEE 802.11a wireless LANs 3455
Nonlinear programming
Utility-based downlink power allocation in multicell wireless packet networks 3913
Non-preemptive $\sum_i$/D-BMAP/D/1/K queuing system
Loss performance model for wireless channels with autocorrelated arrivals and losses 2646
Non-repudiation
Some common attacks against certified email protocols and the countermeasures 2759
Non-split supplicant
Towards self-authenticable smart cards 2781
Non-uniform traffic
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065

NP-complete
On selecting the cost function for source routing 3602
NP-complete
Finding a least hop(s) path subject to multiple additive constraints 392
NP-completeness
Routing and wavelength assignment for core-based tree in WDM networks 1896
NP-completeness
On the construction of energy-efficient maximum residual battery capacity broadcast trees in static ad hoc wireless networks 93
NP-completeness
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
NP-hardness
An iterative distributed algorithm for multi-constraint multicast routing 3647
ns-2
System-level performance evaluation of UMTS with multi-service 1470

Object priority differentiation
Differentiated object priority control mechanism for MPEG-4 streaming 1522
Oblivious transfer
Batch verification of validity of bids in homomorphic e-auction 2798
OBS
Packet-based burst queue modeling at an edge in optical-burst switched networks 634
OCSP
Evaluation of certificate validation mechanisms 291
Oligohop
Performance analysis of resource allocation in wireless multihop networks 983
On-demand ad hoc networks
TAP: Traffic-aware topology control in on-demand ad hoc networks 3877
On-demand routing
A reliable on-demand routing protocol for mobile ad hoc networks with mobility prediction 123
One-step forwarding
Performance analyses of three geography-based location strategies for PCS networks 3327
One-way measurement
On estimating clock skew for one-way measurements 1213
Online TE
Hybrid routing in next generation IP networks 879
Operating systems
Reducing memory fragmentation in network applications with dynamic memory allocators optimized for performance 2612
OPNET
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
Opportunistic scheduling
An opportunistic video scheduling algorithm over shared wireless downlink 1917
Optical buffer
QoS differentiation in optical packet-switched networks 855
Optical burst switching
An efficient preemption-based channel scheduling algorithm for service differentiation in OBS networks 2348
Optical burst switching
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
Optical networking
Two-layer hierarchical wavelength routing for islands of transparency optical networks 2952
Optical networking
A new efficient solution for QoS support in all optical metropolitan area networks 3135
Optical networks
Multiple link failures survivability of optical networks with traffic grooming capability 3900
Optical networks
Improving signaling recovery in shared mesh optical networks 59
Optical packet switching
QoS differentiation in optical packet-switched networks 855
Optical routing
The prediction-based routing in optical transport networks 865
optical-electrical-optical (OEO) conversion
LSP protection for delay-differentiated dynamic traffic in IP-over-WDM networks with port constraints 1402
Optimal bandwidth allocation
Dynamic bandwidth reservation for label switched paths: An on-line predictive approach 3265
Optimal energy allocation
QoS supporting and optimal energy allocation for a cluster based wireless sensor network 2569
Optimal Multicast Tree
Construction of an optimal multicast tree for group communication in a cellular network using genetic algorithm 3306
Optimal principle
Evaluation of restoration techniques incorporating optimal principle in WDM optical networks 1146
Optimization
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Optimization
Estimating the source-destination traffic matrix of a VPN from access-link loads 3663
Optimization
Refined approximations for performance analysis and optimization of queueing model with guard channels for handovers in cellular networks 1386
OSPF
Hybrid routing in next generation IP networks 879
OSPF-TE
Traffic engineering with OSPF-TE and RSVP-TE: Flooding reduction techniques and evaluation of processing cost 2034
Output buffer management
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Overlay
A performance comparison of self-organising application layer multicast overlay construction techniques 2322

Overlay
Overlay subgroup communication in large-scale multicast applications 1201
Overlay
Mobility management across hybrid wireless networks: Trends and challenges 1363
Overlay network
EpiChord: Parallelizing the Chord lookup algorithm with reactive routing state management 1243
Overlay networks
Explicit routing in multicast overlay networks 2201
Overlay networks
Counter-based reliability optimization for gossip-based broadcasting 1516
Overlay routing
End System Multicast routing for multi-party videoconferencing applications 2046
OVSF code
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
OVSF code
Efficient OVSF code assignment and reassignment strategies in UMTS 1538

P2P
MULTI+: A robust and topology-aware peer-to-peer multicast service 900
Packet
Two different approaches for providing QoS in the Internet backbone 3957
Packet aggregation
A new efficient solution for QoS support in all optical metropolitan area networks 3135
Packet cellular networks
A study on switching voice traffic seamlessly between GSM and GPRS cellular networks 1079
Packet delay variation
Clock recovery based on packet inter-arrival time averaging 1696
Packet interleaving
A novel content-aware interleaving for wireless video transmission 2634
Packet networks
Clock recovery based on packet inter-arrival time averaging 1696
Packet processing
A dynamic signaling mechanism based on symbiotic packet processing 77
Packet sampling
Locating network monitors: Complexity, heuristics, and coverage 1564
Packet scheduling
A robust packet scheduling algorithm for proportional delay differentiation services 3679
Packet scheduling
The service curve service discipline for the rate-controlled EDF service discipline in variable-sized packet networks 3886
Packet scheduling
Anatomy of delay performance for the strict priority scheduling scheme in multi-service Internet 69
Packet switching networks
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Packet-switched domain
Management and admission control based on policies and measurements for the packet-switched domain of the UMTS core network 3214
PACS
MULTI+: A robust and topology-aware peer-to-peer multicast service 900
Paging
Modeling location management in wireless networks with generally distributed parameters 2386
Parallel computation
An efficient parallel optimization algorithm for the Token Bucket control mechanism 2281
Parallel encryption modes
On the implementation of security policies with adaptative encryption 2750
Partition avoidance
TAP: Traffic-aware topology control in on-demand ad hoc networks 3877
Passive capacity estimation
Monitoring access link capacity using TFRC probe 1605
Passive measurement
pMeasure: A peer-to-peer measurement infrastructure for the internet 1665
Passive monitoring
Characteristic analysis of internet traffic from the perspective of flows 1639
Passive traffic measurements
Design principles and algorithms for effective high-speed IP flow monitoring 1653
Password
Secure remote user access over insecure networks 660
Password-authenticated key exchange
Cryptanalysis of some improved password-authenticated key exchange schemes 2822
Patching
Utilizing multi-channel multicast to provide scheduled video delivery 1833
Path selection
Minimizing preemption cost for path selection in Diffserv-ware MPLS networks 3825
Pattern codes
Energy-efficient secure pattern based data aggregation for wireless sensor networks 446
PDV
Clock recovery based on packet inter-arrival time averaging 1696
Peer-to-peer
Replica placement in ring based content delivery networks 3313
Peer-to-Peer (p2p) Systems
pMeasure: A peer-to-peer measurement infrastructure for the internet 1665
Peer-to-peer network
Genetic algorithm for delay- and degree-constrained multimedia broadcasting on overlay networks 3625
Peer-to-peer networks
Constructing efficient peer-to-peer overlay topologies by adaptive connection establishment 3567

Penalty cost
Stochastic model and analysis for capacity optimization in communication networks 2377
Performance
On the implementation of security policies with adaptative encryption 2750
Performance
Analyzing the performance and fairness of BitTorrent-like networks using a general fluid model 3946
Performance analysis
An adaptive mobility anchor point selection scheme in Hierarchical Mobile IPv6 networks 3066
Performance analysis
Energy efficiency of collision resolution protocols 3397
Performance evaluation
A performance comparison of self-organising application layer multicast overlay construction techniques 2322
Performance evaluation
On content delivery network implementation 2396
Performance evaluation
A comparison of epidemic algorithms in wireless sensor networks 2450
Performance evaluation
Hazard avoidance in wireless sensor and actor networks 2578
Performance evaluation
Seamless multicast mobility support using fast MIPv6 extensions 3745
Performance evaluation
Anatomy of delay performance for the strict priority scheduling scheme in multi-service Internet 69
Performance evaluation
A simulation-based comparative evaluation of transport protocols for SIP 525
Performance evaluation
Cross-layer modeling of wireless channels for data-link and IP layer performance evaluation 827
Performance Evaluation
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
Performance evaluation
System-level performance evaluation of UMTS with multi-service 1470
Performance evaluation
A combined delay and throughput proportional scheduling scheme for differentiated services 1754
Performance measurement
Evaluating IPv6 on a large-scale network 3113
Performance optimized
Reducing memory fragmentation in network applications with dynamic memory allocators optimized for performance 2612
Phase-locked loop
Clock recovery based on packet inter-arrival time averaging 1696
PHB
Harmonic DiffServ: Scalable support of IP multicast with Qos heterogeneity in DiffServ backbone networks 1780
PIDF
Personalization of internet telephony services for presence with SIP and extended CPL 3766
PKI
Evaluation of certificate validation mechanisms 291
PLRSA
Improve routing trust with promiscuous listening routing security algorithm in mobile ad hoc networks 1121
PNNI
A predictive dynamic output buffer reconfiguration (PDOBR) architecture for ATM networks 3609
Point estimate
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
Point process
Stochastic processes for computer network traffic modeling 1
Pointer-forwarding
Performance analyses of three geography-based location strategies for PCS networks 3327
Poisson and bursty traffic
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
Policy-based management
Dynamic and secure management of VPNs in IPv6 multi-domain scenarios 3122
Policy-based management/networking
Management and admission control based on policies and measurements for the packet-switched domain of the UMTS core network 3214
Policy-based network
SIP-based Qos support architecture and session management in a combined IntServ and DiffServ networks 2996
Popularity ratio
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
port-dependent routing
LSP protection for delay-differentiated dynamic traffic in IP-over-WDM networks with port constraints 1402
port-independent routing
LSP protection for delay-differentiated dynamic traffic in IP-over-WDM networks with port constraints 1402
Power allocation
Utility-based downlink power allocation in multicell wireless packet networks 3913
Power aware sensor networks
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Power conservation
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Power conservation
Connected fixed node degree based topologies in ad hoc networks 1330
Power control
Utility-based downlink power allocation in multicell wireless packet networks 3913
Power saving
Query slipping prevention for trajectory-based publishing and subscribing in wireless sensor networks 1979
Power saving
Energy efficient feedback-based scheduler for delay guarantees in IEEE 802.11e networks 2680

Power saving
CAEM: A channel adaptive approach to energy management for wireless sensor networks 3343
Power saving
A power-saving scheduling for infrastructure-mode 802.11 wireless LANs 3483
Power saving
Overcoming the IEEE 802.11 paradox for realtime multimedia traffic 3507
Power splitters
Optimal placement of multicast and wavelength converting nodes in multicast optical virtual private network 2169
Prediction-based routing
The prediction-based routing in optical transport networks 865
Preemption
Path selection with preemption and re-routing control for multi-protocol label switching networks 3718
Preemption
Minimizing preemption cost for path selection in Diffserv-ware MPLS networks 3825
Preemption
A dynamic approach to reduce preemption in book-ahead reservation in QoS-enabled networks 1443
Preemption-based service differentiation
An efficient preemption-based channel scheduling algorithm for service differentiation in OBS networks 2348
Presence
Personalization of internet telephony services for presence with SIP and extended CPL 3766
Presence extensions
Personalization of internet telephony services for presence with SIP and extended CPL 3766
1/f process
Stochastic processes for computer network traffic modeling 1
Process allocation
An integrated approach with feedback control for robust Web QoS design 3158
Programmable networks
Serviter: A service-oriented programmable network platform for shared infrastructure 624
Programmable router
Serviter: A service-oriented programmable network platform for shared infrastructure 624
Proportional controller
A consolidation algorithm for multicast service using proportional control and neural network predictive techniques 114
Proportional delay differentiation
A robust packet scheduling algorithm for proportional delay differentiation services 3679
Proportional differentiation
An integrated approach with feedback control for robust Web QoS design 3158
Proportional differentiation
A combined delay and throughput proportional scheduling scheme for differentiated services 1754
Protection
Multiple link failures survivability of optical networks with traffic grooming capability 3900
Protection
A novel method for QoS provisioning with protection in GMPLS networks 757
Protection-switching time
A heuristic algorithm for shared segment protection in mesh WDM networks with limited backup path/segments length 3197
Protocol
Design and development of Ethernet-based storage area network protocol 1271
Protocol
Mobility management across hybrid wireless networks: Trends and challenges 1363
Protocol meta-engineering
Interactive Transparent Networking: Protocol meta modeling based on EFSM 3536
Protocol verification
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Protocols
Improving signaling recovery in shared mesh optical networks 59
Provable security
The importance of proofs of security for key establishment protocols. 2788
Proxy handoff
Scalable MPEG-4 streaming over the IPv6 mobile network environment 3104
Public Key Certificates (PKCs)
Secure brokerage mechanisms for mobile electronic commerce 2308
Publish/subscribe trajectory
Query slipping prevention for trajectory-based publishing and subscribing in wireless sensor networks 1979

QoS
Assessed quality of service and voice and data integration: A case study 1992
QoS
Frame-counter scheduler: A novel QoS scheduler for real-time traffic 2181
QoS
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
QoS
Performance evaluation of subflow capable SCTP 2413
QoS
QoS supporting and optimal energy allocation for a cluster based wireless sensor network 2569
QoS
Energy efficient feedback-based scheduler for delay guarantees in IEEE 802.11e networks 2680
QoS
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
QoS
Service index-based fairness scheduling in wireless ad hoc networks 2934
QoS
SIP-based Qos support architecture and session management in a combined IntServ and DiffServ networks 2996

QoS
A new efficient solution for QoS support in all optical metropolitan area networks 3135
QoS
Genetic algorithm for delay- and degree-constrained multimedia broadcasting on overlay networks 3625
QoS
An iterative distributed algorithm for multi-constraint multicast routing 3647
QoS
Two different approaches for providing QoS in the Internet backbone 3957
QoS
A dynamic signaling mechanism based on symbiotic packet processing 77
QoS
An ACK-based polling strategy for supporting high performance and QoS in IEEE 802.11 wireless networks 358
QoS
End-to-end quality of service provisioning through inter-provider traffic engineering 683
QoS
Dynamic bandwidth allocation for efficient support of concurrent digital TV and IP multicast services in DVB-T networks 741
QoS
A novel method for QoS provisioning with protection in GMPLS networks 757
QoS
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
QoS
QoS differentiation in optical packet-switched networks 855
QoS
IPv6 deployment: Real time applications and QoS aspects 1393
QoS
Low latency and efficient packet scheduling for streaming applications 1413
QoS
Multi-threshold bandwidth reservation scheme of an integrated voice/data wireless network 1504
QoS
Service-driven inter-domain QoS monitoring system for large-scale IP and DVB networks 1687
QoS control
A study on switching voice traffic seamlessly between GSM and GPRS cellular networks 1079
QoS guarantee
The service curve service discipline for the rate-controlled EDF service discipline in variable-sized packet networks 3886
QoS guarantee
Anatomy of delay performance for the strict priority scheduling scheme in multi-service Internet 69
QoS heterogeneity
Harmonic DiffServ: Scalable support of IP multicast with Qos heterogeneity in DiffServ backbone networks 1780
QoS in heterogeneous networks
Design and implementation of Dynamic Service Negotiation Protocol (DSNP) 3250
QoS multicast
QoS multicast routing for multimedia group communications using intelligent computational methods 2217
QoS multicasting
QoS multicast routing using Explore Best Path 2881
QoS provisioning
An integrated energy aware wireless transmission system for QoS provisioning in wireless sensor network 162
QoS routing
QoS multicast routing using Explore Best Path 2881
QoS routing
QoS and energy aware routing for real-time traffic in wireless sensor networks 437
QoS Routing
Research challenges in QoS routing 563
QoS routing
A multi-constrained multicast QoS routing algorithm 1811
QoS supportive adaptive polling
QAP: A QoS supportive adaptive polling protocol for wireless LANs 618
Quality of service
A performance study on service integration in IEEE 802.11E wireless LANs 2621
Quality of service
QoS multicast routing using Explore Best Path 2881
Quality of service
Dynamic Application Profiles using Neural Networks for adaptive quality of service support in the Internet 2985
Quality of service
Management and admission control based on policies and measurements for the packet-switched domain of the UMTS core network 3214
Quality of service
A robust packet scheduling algorithm for proportional delay differentiation services 3679
Quality of service
A generic architecture for autonomic service and network management 3691
Quality of service
A simple recursive scheme for adjusting the contention window size in IEEE 802.11e wireless ad hoc networks 3789
Quality of service
Ad hoc quality of service multicast routing 136
Quality of Service
Real-time service provisioning for mobile and wireless networks 540
Quality of service
QAP: A QoS supportive adaptive polling protocol for wireless LANs 618
Quality of service
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
Quality of service
Dynamic resource management for QoS provisioning over next-generation IP-based wireless networks 730
Quality of Service
SQAP: A simple QoS supportive adaptive polling protocol for wireless LANs 934
Quality of service (QoS)
An integrated approach with feedback control for robust Web QoS design 3158

Quality of service (QoS)
Performance evaluation of a novel scheme for QoS provision in UTRA TDD 969
Quality of service (QoS)
Dynamic bandwidth allocation for QoS routing on TDMA-based mobile ad hoc networks 1316
Quality of service (QoS)
A dynamic approach to reduce preemption in book-ahead reservation in QoS-enabled networks 1443
Quality of Service (QoS)
A combined delay and throughput proportional scheduling scheme for differentiated services 1754
Quality of service (QoS)
Online adaptive firewall allocation in internet data center 1858
Quality-of-Service (QoS)
A heuristic algorithm for shared segment protection in mesh WDM networks with limited backup path/segments length 3197
Query aggregation
Effective query aggregation for data services in sensor networks 3733
Query slipping
Query slipping prevention for trajectory-based publishing and subscribing in wireless sensor networks 1979
Queue model
Study on the extensibility of video conferencing with speech mixing 2026
Queueing
A study of H.263 traffic modeling in multipoint videoconference sessions over IP networks 372
Queueing
Low latency and efficient packet scheduling for streaming applications 1413
Queueing analysis
Performance limitations of the MAC layer in 802.15.4 low rate WPAN 2534
Queueing model
Refined approximations for performance analysis and optimization of queueing model with guard channels for handovers in cellular networks 1386
Queuing
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945

Radio resource management
Utility-based downlink power allocation in multicell wireless packet networks 3913
Radio resources allocation
The impact of Soft handoff on the uplink capacity in WCDMA systems 3804
Rake combiners
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
Random Early Detection (RED)
A new TCP-friendly prioritized video multicast protocol using SPLIT protocol 1110
Random sensor scheduling
Coverage-adaptive random sensor scheduling for application-aware data gathering in wireless sensor networks 3467
RASN
SIP as a unified signalling solution in a beyond 3G system 3226
Rate-based congestion control
A consolidation algorithm for multicast service using proportional control and neural network predictive techniques 114
Ratiometric
Distributed and energy-efficient target localization and tracking in wireless sensor networks 2494
Reachability monitoring
Practical utilities for monitoring multicast service availability 1675
Read/write model
Transformations for write-all-with-collision model 183
Reader collision
Taxonomy and survey of RFID anti-collision protocols 2150
Real-Time
Low latency and efficient packet scheduling for streaming applications 1413
Real-time applications
IPv6 deployment: Real time applications and QoS aspects 1393
Real-Time communication
QoS and energy aware routing for real-time traffic in wireless sensor networks 437
Real-time media
Application layer multicast tree for real-time media delivery 1480
Real-time parameter estimation
Estimation of multifractal parameters in traffic measurement: An accuracy-based real-time approach 1879
Real-time services
Real-time service provisioning for mobile and wireless networks 540
Real-time traffic
Frame-counter scheduler: A novel QoS scheduler for real-time traffic 2181
Reassignment
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
Reciprocal capacity
Constructing efficient peer-to-peer overlay topologies by adaptive connection establishment 3567
Recursive system identification
Adaptive model predictive TCP delay-based congestion control 1963
Recycled path routing
Recycled path routing in mobile ad hoc networks 1552
Reduced Memory Algorithm
An efficient parallel optimization algorithm for the Token Bucket control mechanism 2281
Reference execution
Protection of a mobile agent with a reference clone 268
Regeneration
Dynamic routing and wavelength assignment algorithms in wavelength division multiplexed translucent optical networks 2975
Relay node placement
Relay node placement in large scale wireless sensor networks 490

Relay schedule
Serialized optimal relay schedules in two-tiered wireless sensor networks 511
Reliability
Counter-based reliability optimization for gossip-based broadcasting 1516
Reliable multicast
Load-balanced agent activation for value-added network services. 1905
Reliable multicast
A combined group/tree approach for scalable many-to-many reliable multicast 3863
Reliable routing
A reliable on-demand routing protocol for mobile ad hoc networks with mobility prediction 123
Remote subscriptions
Seamless multicast mobility support using fast MIPv6 extensions 3745
Replay attacks
Cryptanalysis of some improved password-authenticated key exchange schemes 2822
Replica placement algorithm
Replica placement in ring based content delivery networks 3313
Request rate
Adaptive segment-based patching scheme for video streaming delivery system 1889
Re-routing
Path selection with preemption and re-routing control for multi-protocol label switching networks 3718
Resale
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
Resource allocation
Path selection with preemption and re-routing control for multi-protocol label switching networks 3718
Resource allocation
Performance analysis of resource allocation in wireless multihop networks 983
Resource allocation
Resource allocation for real-time and non-real-time traffic in wireless networks 1722
Resource and service discovery
Analysis of decentralized resource and service discovery mechanisms in wireless multi-hop networks 2710
Resource management
Dynamic bandwidth allocation for efficient support of concurrent digital TV and IP multicast services in DVB-T networks 741
Resource management
Efficient OVSF code assignment and reassignment strategies in UMTS 1538
Resource partitioning
QoS differentiation in optical packet-switched networks 855
Resource request
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
Resources reservation
Performance evaluation of a novel scheme for QoS provision in UTRA TDD 969
Response delay
Self-monitoring of wireless sensor networks 462
Restoration
Evaluation of restoration techniques incorporating optimal principle in WDM optical networks 1146
Restricted Dynamic Programming
Near-optimal data allocation over multiple broadcast channels 1341
Retransmission
Efficient and fast retransmission for wireless networks 2964
Retransmission policy
Retransmission policies for multihomed transport protocols 1798
Rewarding
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
RFID tag
Taxonomy and survey of RFID anti-collision protocols 2150
Risk
Stochastic model and analysis for capacity optimization in communication networks 2377
Robustness
Efficient and robust geocasting protocols for sensor networks 151
Round trip time estimation
Estimation of network distances using off-line measurements 3295
Route discovery
An entropy-constrained algorithm for routing of communication networks 3182
Route discovery
Recycled path routing in mobile ad hoc networks 1552
Route interference
End-to-end QoS guarantees for a network based on Latency-Rate Max–Min service curve 3833
Route lookup
A scalable IPv6 route lookup scheme via dynamic variable-stride bitmap compression and path compression 3037
Route maintenance
An entropy-constrained algorithm for routing of communication networks 3182
Router
High-speed IP address lookup using balanced multi-way trees 1927
Router advertisement
MultiGate6: An IPv6 multihoming gateway using a hybrid approach 1842
Routing
Localized routing with guaranteed delivery and a realistic physical layer in wireless sensor networks 2550
Routing
Interference-based routing in multi-hop wireless infrastructures 2693
Routing
A fast and scalable IPv4 and 6 address lookup algorithm 3020
Routing
Applying 4-regular grid structures in large-scale access networks 1350
Routing algorithm
An entropy-constrained algorithm for routing of communication networks 3182

Routing algorithms
A heuristic algorithm for shared segment protection in mesh WDM networks with limited backup path/segments length 3197
Routing and wavelength assignment
Routing and wavelength assignment for core-based tree in WDM networks 1896
Routing and wavelength assignment
Dynamic routing and wavelength assignment algorithms in wavelength division multiplexed translucent optical networks 2975
Routing header
Extension headers for IPv6 anycast 3013
Routing inaccuracy
The prediction-based routing in optical transport networks 865
routing optimization
Research challenges in QoS routing 563
Routing Protocol
Incorporating trust and reputation in the DSR protocol for dependable routing 2806
Routing Protocol
An iterative distributed algorithm for multi-constraint multicast routing 3647
Routing protocol
Dynamic bandwidth allocation for QoS routing on TDMA-based mobile ad hoc networks 1316
Routing trust
Improve routing trust with promiscuous listening routing security algorithm in mobile ad hoc networks 1121
RSVP
SIP-based Qos support architecture and session management in a combined IntServ and DiffServ networks 2996
RSVP-TE
Traffic engineering with OSPF-TE and RSVP-TE: Flooding reduction techniques and evaluation of processing cost 2034
RWA
Two-layer hierarchical wavelength routing for islands of transparency optical networks 2952
RWA
Dynamic multicast routing under delay constraints in WDM networks with heterogeneous light splitting capabilities 1492

Sampling
A measurement framework for inter-domain SLA validation 703
SAN
Design and development of Ethernet-based storage area network protocol 1271
Scalability
Analysis and evaluation of a multiple gateway traffic-distribution scheme for gateway clusters 3170
Scalability
Secret instantiation in ad-hoc networks 200
Scalability
Harmonic DiffServ: Scalable support of IP multicast with Qos heterogeneity in DiffServ backbone networks 1780
Scheduled video delivery
Utilizing multi-channel multicast to provide scheduled video delivery 1833
Scheduling
Service index-based fairness scheduling in wireless ad hoc networks 2934
Scheduling
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Scheduling
An energy diffserv and application-aware MAC scheduling for VBR streaming video in the IEEE 802.15.3 high-rate wireless personal area networks 3516
Scheduling
An integrated scheduling and buffer management scheme for input queued switches with finite buffer space 42
Scheduling
Low latency and efficient packet scheduling for streaming applications 1413
Scheduling disciplines
Service differentiation with MEDF scheduling in TCP/IP networks 812
SCTP
Performance evaluation of subflow capable SCTP 2413
SCTP
A simulation-based comparative evaluation of transport protocols for SIP 525
SCTP
Retransmission policies for multihomed transport protocols 1798
Seamless continuity of services
Seamless continuity of PS-services in WLAN/3G interworking 1055
Seamless hand-off
An approach for seamless handoff among mobile WLAN/GPRS integrated networks 32
Seamless handover
Seamless multicast mobility support using fast MIPv6 extensions 3745
Seamless service interworking
A framework for seamless service interworking in ad-hoc networks 3277
Seamless service provision
A flexible handover mechanism for seamless service continuity in heterogeneous environments 717
Secure communication
GeoSENS: geo-based sensor network secure communication protocol 456
Secure routing
INSENS: Intrusion-tolerant routing for wireless sensor networks 216
Security
SSL/TLS session-aware user authentication – Or how to effectively thwart the man-in-the-middle 2238
Security
SCON: Secure management of continuity in sensor networks 2458
Security
A lightweight secure protocol for wireless sensor networks 2556
Security
On the implementation of security policies with adaptative encryption 2750

Security
Incorporating trust and reputation in the DSR protocol for dependable routing 2806
Security
A framework for seamless service interworking in ad-hoc networks 3277
Security
Secret instantiation in ad-hoc networks 200
Security
INSENS: Intrusion-tolerant routing for wireless sensor networks 216
Security
Protection of a mobile agent with a reference clone 268
Security
Energy-efficient secure pattern based data aggregation for wireless sensor networks 446
Security
Real-time service provisioning for mobile and wireless networks 540
Security
Secure remote user access over insecure networks 660
Security
Improve routing trust with promiscuous listening routing security algorithm in mobile ad hoc networks 1121
Security
Online adaptive firewall allocation in internet data center 1858
Security architecture
Secure distributed intelligent networks 325
Security policies
Secure distributed intelligent networks 325
Security policy
On the implementation of security policies with adaptative encryption 2750
Security protocol
Some common attacks against certified email protocols and the countermeasures 2759
Security protocols
Cryptanalysis of some improved password-authenticated key exchange schemes 2822
Self-dispatching
Analysis and evaluation of a multiple gateway traffic-distribution scheme for gateway clusters 3170
Selfish receivers
Stability of ALM Tree with selfish receivers: A simulation study 2895
Self-managing
An observation-based approach towards self-managing web servers 1174
Self-organization
A self-organizable topology maintenance protocol for mobile group communications in mobile next-generation networks 1730
Self-similarity
Stochastic processes for computer network traffic modeling 1
Self-stabilization
Transformations for write-all-with-collision model 183
Sensor data gathering
Coverage-adaptive random sensor scheduling for application-aware data gathering in wireless sensor networks 3467
Sensor network
A topology discovery algorithm for sensor network using smart antennas 2261
Sensor network
Magnetic diffusion: Scalability, reliability, and QoS of data dissemination mechanisms for wireless sensor networks 2482
Sensor network
Distributed and energy-efficient target localization and tracking in wireless sensor networks 2494
Sensor network
Effective query aggregation for data services in sensor networks 3733
Sensor network
INSENS: Intrusion-tolerant routing for wireless sensor networks 216
Sensor network
Energy-efficient secure pattern based data aggregation for wireless sensor networks 446
Sensor networks
SCON: Secure management of continuity in sensor networks 2458
Sensor networks
Adaptive ad hoc self-organizing scheduling for quasi-periodic sensor network lifetime 3366
Sensor networks
Activity scheduling based on cross-layer information in Bluetooth sensor networks 3385
Sensor Networks
Secret instantiation in ad-hoc networks 200
Sensor networks
Achieving dependability in sensor networks through automated requirements-based programming 246
Sensor networks
QoS and energy aware routing for real-time traffic in wireless sensor networks 437
Sensor networks
GeoSENS: geo-based sensor network secure communication protocol 456
Sensor networks
On the lifetime of large scale sensor networks 502
Sensor networks
HDA: A hierarchical data aggregation scheme for sensor networks 1292
Server location optimization
Optimal assignment of distributed servers to virtual partitionsfor the provision of immersive voice communicationin massively multiplayer games 1260
Server placement
A network-centric approach to enhancing the interactivity of large-scale distributed virtual environments 3553
Server selection
Dynamic server selection using fuzzy inference in content distribution networks 1026
Service deployment
Serviter: A service-oriented programmable network platform for shared infrastructure 624
Service discovery
A framework for seamless service interworking in ad-hoc networks 3277

Service discovery protocol
PCPGSD: An enhanced GSD service discovery protocol for MANETs 2433
Service index
Service index-based fairness scheduling in wireless ad hoc networks 2934
Service interworking
A framework for seamless service interworking in ad-hoc networks 3277
Service level agreement
A generic architecture for autonomic service and network management 3691
Service level specification
End-to-end quality of service provisioning through inter-provider traffic engineering 683
Service location
pMeasure: A peer-to-peer measurement infrastructure for the internet 1665
Service provisioning
Real-time service provisioning for mobile and wireless networks 540
Service station
Comparison of motivation-based cooperation mechanisms for hybrid wireless networks 2661
Servicing cost
A client-assisted interval caching strategy for video-on-demand systems 3780
Session management
A framework for seamless service interworking in ad-hoc networks 3277
Set cover problem
Locating network monitors: Complexity, heuristics, and coverage 1564
Set-top-box (STB)
A broadcasting scheme with supporting VCR functions for near video-on-demand systems 257
Shaping
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
Shared mesh restoration
Improving signaling recovery in shared mesh optical networks 59
Shared segment protection
A heuristic algorithm for shared segment protection in mesh WDM networks with limited backup path/segments length 3197
Shortest disjoint paths
Evaluation of restoration techniques incorporating optimal principle in WDM optical networks 1146
Short-lived certificates
Evaluation of certificate validation mechanisms 291
Signal processing
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Signaling
A dynamic signaling mechanism based on symbiotic packet processing 77
Silent networking
Silent networking for energy-constrained nodes 3445
Simple QoS supportive adaptive polling
SQAP: A simple QoS supportive adaptive polling protocol for wireless LANs 934
Simulation
A performance comparison of self-organising application layer multicast overlay construction techniques 2322
Simulation
TAP: Traffic-aware topology control in on-demand ad hoc networks 3877
Simulation
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
Simulation
A combined delay and throughput proportional scheduling scheme for differentiated services 1754
Simulations
Hazard avoidance in wireless sensor and actor networks 2578
Simulations
Quantifying the effects of recent protocol improvements to TCP: Impact on Web performance 2853
Simulations
Multiple link failures survivability of optical networks with traffic grooming capability 3900
Simulations
Improving signaling recovery in shared mesh optical networks 59
Simulations
System-level performance evaluation of UMTS with multi-service 1470
Sink-to-sensors data delivery
Hazard avoidance in wireless sensor and actor networks 2578
SIP
SIP-based Qos support architecture and session management in a combined IntServ and DiffServ networks 2996
SIP
A framework for seamless service interworking in ad-hoc networks 3277
SIP
Personalization of internet telephony services for presence with SIP and extended CPL 3766
SIP
A simulation-based comparative evaluation of transport protocols for SIP 525
SIP Protocol
SIP-based MIP6-MANET: Design and implementation of mobile IPv6 and SIP-based mobile ad hoc networks 1226
SIP_{RAN}
SIP as a unified signalling solution in a beyond 3G system 3226
SLA validation
A measurement framework for inter-domain SLA validation 703
SLA/SLS
Service-driven inter-domain QoS monitoring system for large-scale IP and DVB networks 1687
Sleep scheduling
Sleep scheduling for wireless sensor networks via network flow model 2469

Sleep scheduling
Cross-layer application-specific wireless sensor network design with single-channel CSMA MAC over sense-sleep trees 3425
Slot allocation strategy
Performance evaluation of a novel scheme for QoS provision in UTRA TDD 969
SLP
A framework for seamless service interworking in ad-hoc networks 3277
SLS
End-to-end quality of service provisioning through inter-provider traffic engineering 683
Smart antenna
A topology discovery algorithm for sensor network using smart antennas 2261
Smart card security
Towards self-authenticable smart cards 2781
Smart direct link
Performance analysis of resource allocation in wireless multihop networks 983
Soft handoff
The impact of Soft handoff on the uplink capacity in WCDMA systems 3804
Software
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Software reflection
Design and implementation of a dynamic protocol framework 1309
Source-destination traffic matrix
Estimating the source-destination traffic matrix of a VPN from access-link loads 3663
Source-to-sink delay
QoS supporting and optimal energy allocation for a cluster based wireless sensor network 2569
Spanning-tree graph
Topology aggregation: Merged-star method for multiple non-isomorphic topology subgraphs. 1959
Speech mixing
Study on the extensibility of video conferencing with speech mixing 2026
SPLIT
A new TCP-friendly prioritized video multicast protocol using SPLIT protocol 1110
Spreading codes
The impact of Soft handoff on the uplink capacity in WCDMA systems 3804
SSL/TLS protocol
SSL/TLS session-aware user authentication – Or how to effectively thwart the man-in-the-middle 2238
Stability
Stability of ALM Tree with selfish receivers: A simulation study 2895
Star graph
Topology aggregation: Merged-star method for multiple non-isomorphic topology subgraphs. 1959
State estimation
Speed control and policing in a cellular mobile network: SpeedNet 3633
Statistical bandwidth multiplexing
On the fairness of dynamic bandwidth allocation schemes in Ethernet passive optical networks 2123
Stochastic traffic engineering
Stochastic model and analysis for capacity optimization in communication networks 2377
Stream scheduling
Utilizing multi-channel multicast to provide scheduled video delivery 1833
Subgroup
Overlay subgroup communication in large-scale multicast applications 1201
Subscriber identity module
SIM-based subscriber authentication mechanism for wireless local area networks 1744
Superimposed codes
Slot synchronized topology-transparent scheduling for sensor networks 421
Supervision and control systems
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
Surveillance
Self-monitoring of wireless sensor networks 462
Surveillance wireless sensor networks
How many sensors for an acceptable breach detection probability 173
Survivability
A heuristic algorithm for shared segment protection in mesh WDM networks with limited backup path/segments length 3197
Survivability
Evaluation of restoration techniques incorporating optimal principle in WDM optical networks 1146
SW
A comparison of stop-and-wait and go-back-N ARQ schemes for IEEE 802.11e wireless infrared networks 1015
Switches
An integrated scheduling and buffer management scheme for input queued switches with finite buffer space 42
Synchronization
Slot synchronized topology-transparent scheduling for sensor networks 421
Synchronization
Design and implementation of a dynamic protocol framework 1309
System design
Performance analysis of resource allocation in wireless multihop networks 983
System performance
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921

Tag collision
Taxonomy and survey of RFID anti-collision protocols 2150
Target localization
Distributed and energy-efficient target localization and tracking in wireless sensor networks 2494
TCP
Quantifying the effects of recent protocol improvements to TCP: Impact on Web performance 2853

TCP
Interactive Transparent Networking: Protocol meta modeling based on EFSM 3536
TCP
A simulation-based comparative evaluation of transport protocols for SIP 525
TCP
ImTCP: TCP with an inline measurement mechanism for available bandwidth 1614
TCP Reno
The PFTK-model revised 2671
TCP throughput modeling
The PFTK-model revised 2671
TCP Vegas
Edge-to-edge proactive congestion control for aggregated traffic 801
TCP-friendly
A new TCP-friendly prioritized video multicast protocol using SPLIT protocol 1110
TDM
Clock recovery based on packet inter-arrival time averaging 1696
TDMA
Overcoming the IEEE 802.11 paradox for realtime multimedia traffic 3507
TDMA/TDD
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
Telecom convergence
Assessed quality of service and voice and data integration: A case study 1992
Teletraffic
Two different approaches for providing QoS in the Internet backbone 3957
Teletraffic
An integrated model of packetized VBR teletraffic source for cellular NG All-IP wireless networks 957
TFRC Probe
Monitoring access link capacity using TFRC probe 1605
Time and space complexity
Construction of an optimal multicast tree for group communication in a cellular network using genetic algorithm 3306
Time division multiple access (TDMA)
Dynamic bandwidth allocation for QoS routing on TDMA-based mobile ad hoc networks 1316
Time synchronization
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Timing recovery
Clock recovery based on packet inter-arrival time averaging 1696
Token bucket
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
Token Buckets
An efficient parallel optimization algorithm for the Token Bucket control mechanism 2281
Toolbox
An open source traffic engineering toolbox 593
Topology
Applying 4-regular grid structures in large-scale access networks 1350
Topology control
Analysis of a topology control paradigm in WLAN/WPAN environments 2096
Topology control
An SPT-based topology control algorithm for wireless ad-hoc networks 3092
Topology control
Serialized optimal relay schedules in two-tiered wireless sensor networks 511
Topology control
Connected fixed node degree based topologies in ad hoc networks 1330
Topology discovery
A topology discovery algorithm for sensor network using smart antennas 2261
Topology inference
Multicast-based inference for topology and network-internal loss performance from end-to-end measurements 1936
Topology parameter
Topology aggregation: Merged-star method for multiple non-isomorphic topology subgraphs. 1959
Topology-aware
MULTI+: A robust and topology-aware peer-to-peer multicast service 900
Topology-sensitive
Overlay subgroup communication in large-scale multicast applications 1201
Topology-transparent scheduling
Slot synchronized topology-transparent scheduling for sensor networks 421
Tracking
Distributed and energy-efficient target localization and tracking in wireless sensor networks 2494
Tradeoff security–connectivity–cost
SCON: Secure management of continuity in sensor networks 2458
Traffic analysis
Enhancing network traffic prediction and anomaly detection via statistical network traffic separation and combination strategies 1627
Traffic analysis
Characteristic analysis of internet traffic from the perspective of flows 1639
Traffic awareness
TAP: Traffic-aware topology control in on-demand ad hoc networks 3877
Traffic Control
Traffic shaping based on an exponential token bucket for quantitative QoS: implementation and experiments on DiffServ routers 781
Traffic engineering
Estimating the source-destination traffic matrix of a VPN from access-link loads 3663
Traffic engineering
An open source traffic engineering toolbox 593
Traffic engineering
End-to-end quality of service provisioning through inter-provider traffic engineering 683

Traffic engineering
An efficient traffic engineering approach based on flow distribution and splitting in MPLS networks 1284
Traffic flow
Characteristic analysis of internet traffic from the perspective of flows 1639
Traffic grooming
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
Traffic grooming and routing
Multiple link failures survivability of optical networks with traffic grooming capability 3900
Traffic management
Improvement of LRU cache for the detection and control of long-lived high bandwidth flows 103
Traffic modeling
Stochastic processes for computer network traffic modeling 1
Traffic prediction
Enhancing network traffic prediction and anomaly detection via statistical network traffic separation and combination strategies 1627
Traffic scheduling
Prioritized support of different traffic classes in IEEE 802.11e wireless LANs 2867
Traffic scheduling
A power-saving scheduling for infrastructure-mode 802.11 wireless LANs 3483
Trajectory-based matchmaking
Query slipping prevention for trajectory-based publishing and subscribing in wireless sensor networks 1979
Translucent optical networks
Dynamic routing and wavelength assignment algorithms in wavelength division multiplexed translucent optical networks 2975
Transmission Control Protocol
Adaptive model predictive TCP delay-based congestion control 1963
Transmission control protocol
TCP performance in wireless networks with delay spike and different initial congestion window sizes 926
Transmission Control Protocol (TCP)
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
Transport
A simulation-based comparative evaluation of transport protocols for SIP 525
Transport efficiency
Efficiency and quality of service issues in MPLS transport for the UMTS access network 820
Transport protocols
Retransmission policies for multihomed transport protocols 1798
Tree management
A case for tree evolution in QoS multicasting. 2004
Tree migration
A case for tree evolution in QoS multicasting. 2004
Trust
Incorporating trust and reputation in the DSR protocol for dependable routing 2806
Trust
Constructing efficient peer-to-peer overlay topologies by adaptive connection establishment 3567
Trust management system
Dynamic and secure management of VPNs in IPv6 multi-domain scenarios 3122
Tunable QoS
Optimized QoS priority routing for service tunability and overhead reduction using swarm based active network scheme 765
Turbo encoder/decoder
Modeling the bit-level stochastic correlation for turbo decoding 3856
Two-tier cellular networks
Modeling and analysis of queuing handoff calls in single and two-tier cellular networks 3580

UDP
A simulation-based comparative evaluation of transport protocols for SIP 525
UMTS
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
UMTS
Location assisted fast vertical handover for UMTS/WLAN overlay networks 2601
UMTS
Management and admission control based on policies and measurements for the packet-switched domain of the UMTS core network 3214
UMTS
SIP as a unified signalling solution in a beyond 3G system 3226
UMTS
Efficiency and quality of service issues in MPLS transport for the UMTS access network 820
UMTS
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
UMTS
System-level performance evaluation of UMTS with multi-service 1470
Underwater littoral surveillance
Energy-efficient scheduling and hybrid communication architecture for underwater littoral surveillance 3354
Unidirectional ring
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
Unresponsive flows
A rate-based drop policy for punishing unresponsive flows 1868
User
Secure remote user access over insecure networks 660
User authentication
SSL/TLS session-aware user authentication – Or how to effectively thwart the man-in-the-middle 2238
User profile replication
An efficient location management scheme based on replication strategy for intersystem roaming in mobile wireless networks 3238

Utility
Utility-based downlink power allocation in multicell wireless packet networks 3913
UTRA TDD
Performance evaluation of a novel scheme for QoS provision in UTRA TDD 969

Value-added service
Load-balanced agent activation for value-added network services. 1905
Variable bit rate
Performance optimization of an adaptive wireless push system in environments with locality of demand 2542
Variable-bit-rate (VBR)
A smooth broadcasting scheme for VBR-encoded hot videos 2904
Verifiable random function
Practical electronic lotteries with offline TTP 2830
Video conferencing
Study on the extensibility of video conferencing with speech mixing 2026
Video quality
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
Video stream
A client-assisted interval caching strategy for video-on-demand systems 3780
Video streaming
An opportunistic video scheduling algorithm over shared wireless downlink 1917
Video streaming
Cross-layer conditional retransmission for layered video streaming over cellular networks 2066
Video Streaming
Adaptive segment-based patching scheme for video streaming delivery system 1889
Video transmission
A novel content-aware interleaving for wireless video transmission 2634
Video-cassette-recorder (VCR) functions
A broadcasting scheme with supporting VCR functions for near video-on-demand systems 257
Video-on-demand (VOD)
A smooth broadcasting scheme for VBR-encoded hot videos 2904
Virtual private network
Optimal placement of multicast and wavelength converting nodes in multicast optical virtual private network 2169
Virtual private network
Estimating the source-destination traffic matrix of a VPN from access-link loads 3663
Virtual private networks
Analysis of communication alternatives in a heterogeneous network for a supervision and control system 1133
Voice over IP (VoIP)
A study on switching voice traffic seamlessly between GSM and GPRS cellular networks 1079
Voice/data integration
A dynamic channel assignment scheme for voice/data integration in GPRS networks 1163
VoIP
Assessed quality of service and voice and data integration: A case study 1992
VoIP
An experimental performance analysis of MAC multicast in 802.11b networks for VoIP traffic 938
VoIP
On the deployment of VoIP in Ethernet networks: methodology and case study 1039
VoIP
On the impact of loss and delay variation on Internet packet audio transmission 1578
Vulnerabilities
Implementation of an IPv6 multicast firewall testbed 3079
Vulnerability
Secure remote user access over insecure networks 660
Vulnerability analysis
Using attack graphs for correlating, hypothesizing, and predicting intrusion alerts 2917
Vulnerability analysis
Minimum-cost network hardening using attack graphs 3812

WAN
Applying 4-regular grid structures in large-scale access networks 1350
Waste rate
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
Wavelength conversion
Optimal placement of multicast and wavelength converting nodes in multicast optical virtual private network 2169
Wavelength division multiplexed
Dynamic routing and wavelength assignment algorithms in wavelength division multiplexed translucent optical networks 2975
Wavelength division multiplexing
A flexible contention resolution scheme for QoS provisioning in optical burst switching networks 2361
Wavelength division multiplexing
LSP protection for delay-differentiated dynamic traffic in IP-over-WDM networks with port constraints 1402
Wavelength division multiplexing (WDM)
A heuristic algorithm for shared segment protection in mesh WDM networks with limited backup path/segments length 3197
Wavelet transform
Estimation of multifractal parameters in traffic measurement: An accuracy-based real-time approach 1879
WCDMA
Multicode-based WCDMA for reducing waste rate and reassignments in mobile cellular communications 1948
WCDMA
Adaptive radio resource with borrowing for multi-operators 3G+ wireless networks with heterogeneous traffic 2945
WCDMA
The impact of Soft handoff on the uplink capacity in WCDMA systems 3804
WDM
Routing and wavelength assignment for core-based tree in WDM networks 1896

WDM
Optimal placement of multicast and wavelength converting nodes in multicast optical virtual private network 2169
WDM
A novel dynamic fault restoration mechanism using cluster allocation approach in WDM mesh networks 3921
WDM
Evaluation of restoration techniques incorporating optimal principle in WDM optical networks 1146
WDM network
Dynamic multicast routing under delay constraints in WDM networks with heterogeneous light splitting capabilities 1492
WDM networks
Grooming of non-uniform traffic on unidirectional and bidirectional rings 1065
Web server
An observation-based approach towards self-managing web servers 1174
Weighted max–min fairness
On the fairness of dynamic bandwidth allocation schemes in Ethernet passive optical networks 2123
Wideband CDMA
Efficient OVSF code assignment and reassignment strategies in UMTS 1538
WiFi phones
Silent networking for energy-constrained nodes 3445
Wireless
Interference-based routing in multi-hop wireless infrastructures 2693
Wireless
Modeling the performance of flooding in wireless multi-hop Ad hoc networks 949
Wireless
Mobility management across hybrid wireless networks: Trends and challenges 1363
Wireless LAN
A performance study on service integration in IEEE 802.11E wireless LANs 2621
Wireless ad hoc networks
Blue-Park: Energy-efficient operation of Bluetooth networks using park mode 3416
Wireless ad hoc networks
On the construction of energy-efficient maximum residual battery capacity broadcast trees in static ad hoc wireless networks 93
Wireless application system
Multi-user data multiplexing for digital multimedia broadcasting 3970
Wireless cellular network
TCP performance in wireless networks with delay spike and different initial congestion window sizes 926
Wireless channel model
Loss performance model for wireless channels with autocorrelated arrivals and losses 2646
Wireless communication
Energy efficiency and error resilience in coordinated and non-coordinated medium access control protocols 3493
Wireless communication
Ad hoc quality of service multicast routing 136
Wireless Differentiated Service
Design and implementation of Dynamic Service Negotiation Protocol (DSNP) 3250
Wireless downlink
An opportunistic video scheduling algorithm over shared wireless downlink 1917
Wireless IP
End-to-end QoS support for IP and multimedia traffic in heterogeneous mobile networks 671
Wireless LAN
A power-saving scheduling for infrastructure-mode 802.11 wireless LANs 3483
Wireless LAN
A simple recursive scheme for adjusting the contention window size in IEEE 802.11e wireless ad hoc networks 3789
Wireless LAN
An approach for seamless handoff among mobile WLAN/GPRS integrated networks 32
Wireless LAN
End-to-end delay analysis and admission control in 802.11 DCF WLANs 842
Wireless LANs
QAP: A QoS supportive adaptive polling protocol for wireless LANs 618
Wireless LANs
SQAP: A simple QoS supportive adaptive polling protocol for wireless LANs 934
Wireless local area network
SIM-based subscriber authentication mechanism for wireless local area networks 1744
Wireless MAC
Service index-based fairness scheduling in wireless ad hoc networks 2934
Wireless MAC
Energy efficiency of collision resolution protocols 3397
Wireless network
A novel content-aware interleaving for wireless video transmission 2634
Wireless network
Maximum lifetime rate control and random access in multi-hop wireless networks 3844
Wireless Network
SIP-based MIP6-MANET: Design and implementation of mobile IPv6 and SIP-based mobile ad hoc networks 1226
Wireless networks
Modeling location management in wireless networks with generally distributed parameters 2386
Wireless networks
Experimenting with τ-AIMD over wireless asynchronous networks 2702
Wireless networks
Efficient and fast retransmission for wireless networks 2964
Wireless networks
Dynamic bandwidth allocation for QoS routing on TDMA-based mobile ad hoc networks 1316
Wireless networks
Resource allocation for real-time and non-real-time traffic in wireless networks 1722
Wireless packet networks
Utility-based downlink power allocation in multicell wireless packet networks 3913

Wireless sensor and actor networks
Hazard avoidance in wireless sensor and actor networks 2578
Wireless sensor network
Energy efficient information dissemination protocols by negotiation for wireless sensor networks 2136
Wireless sensor network
QoS supporting and optimal energy allocation for a cluster based wireless sensor network 2569
Wireless sensor network
Energy efficient routing and scheduling for real-time data aggregation in WSNs 3527
Wireless sensor network
An integrated energy aware wireless transmission system for QoS provisioning in wireless sensor network 162
Wireless sensor network
Dynamic cell-based MAC protocol for target detection applications in energy-constrained wireless networks 429
Wireless sensor network
Relay node placement in large scale wireless sensor networks 490
Wireless sensor networks
Design of a distributed energy-efficient clustering algorithm for heterogeneous wireless sensor networks 2230
Wireless sensor networks
A comparison of epidemic algorithms in wireless sensor networks 2450
Wireless sensor networks
Sleep scheduling for wireless sensor networks via network flow model 2469
Wireless sensor networks
E-Span and LPT for data aggregation in wireless sensor networks 2506
Wireless sensor networks
Wireless sensor networks for personal health monitoring: Issues and an implementation 2521
Wireless sensor networks
Localized routing with guaranteed delivery and a realistic physical layer in wireless sensor networks 2550
Wireless sensor networks
A lightweight secure protocol for wireless sensor networks 2556
Wireless sensor networks
CAEM: A channel adaptive approach to energy management for wireless sensor networks 3343
Wireless sensor networks
Cross-layer application-specific wireless sensor network design with single-channel CSMA MAC over sense-sleep trees 3425
Wireless sensor networks
Coverage-adaptive random sensor scheduling for application-aware data gathering in wireless sensor networks 3467
Wireless sensor networks
Efficient and robust geocasting protocols for sensor networks 151
Wireless sensor networks
Energy-efficient differentiated directed diffusion (EDDD) in wireless sensor networks 231
Wireless sensor networks
Energy-efficient coverage problems in wireless ad-hoc sensor networks 413
Wireless sensor networks
Self-monitoring of wireless sensor networks 462
Wireless sensor networks
A new energy efficient and fault-tolerant protocol for data propagation in smart dust networks using varying transmission range 477
Wireless sensor networks
Serialized optimal relay schedules in two-tiered wireless sensor networks 511
WLAN
Analysis of a topology control paradigm in WLAN/WPAN environments 2096
WLAN
Location assisted fast vertical handover for UMTS/WLAN overlay networks 2601
WLAN
Energy efficient feedback-based scheduler for delay guarantees in IEEE 802.11e networks 2680
WLAN
QoS mechanisms for multimedia communications over TDMA/TDD WLANs 2721
WPAN
Analysis of a topology control paradigm in WLAN/WPAN environments 2096
Write-all-with-collision model
Transformations for write-all-with-collision model 183

XKMS
Evaluation of certificate validation mechanisms 291

ZigBee
Performance limitations of the MAC layer in 802.15.4 low rate WPAN 2534
Zipf-like behavior
E-MACSC: A novel dynamic cache tuning technique to reduce information retrieval roundtrip time over the Internet 1094
